US 6 from I-15 in Spanish Fork to I-70 in Green River in Utah, Wasatch, Carbon, and Emery Counties, 2005 Neuropsychological Evaluation of the Spanish Speaker Alfredo Ardila, Monica Rosselli, Antonio E. Puente, 2013-06-29 This book is the culmination of a research program conducted in Colombia during the past several years The fundamental aim of the program was to develop neuropsychological tests for Spanish speakers especially elderly individuals and those with limited educational attainment The lack of norms for these populations represents a significant practical problem not only in developing countries but also in more developed countries For example norms are usually obtained with middle class Anglo Saxon English speaking populations often university students and such norms do not usually include individuals older than 65 years Furthermore very few neuropsychological tests have been developed for Spanish speakers frequently tests are translated into Spanish often poor translations at that but the norms used are still those obtained from English speaking populations This volume summarizes the normative results of this research program We anticipate that these tests and norms will be particularly useful in the neuropsychological evaluation of Spanish speakers especially those with limited educational attainment and the elderly The United States represents the fifth largest Spanish speaking country in the world after Mexico Spain Argentina and Colombia with over 20 million speakers It is anticipated that by the year 2025 there will be as many Hispanics in the United States as members of all other ethnic minority groups combined Further about 10% of the U S population are considered functionally illiterate with Hispanics representing an unusually large segment *Interaction in Paired Oral Proficiency Assessment in Spanish* Ana Maria Ducasse, 2010 Defining the construct of interaction for paired assessment purposes has been difficult despite the evolution of our view of language to include the social perspective of co construction and the fact that such discourse is increasingly taught and assessed In this volume three sequenced studies define interaction in paired oral assessment through the verbal protocols of learners of Spanish and their assessors Assessors then scale performances from videotaped test performance data resulting in the development of an evidence based rating process which includes non verbal interpersonal communication interactive
