incremental changes in people's habitats and livelihoods making them migrate in search of better places and income. With or without climate change, climatic and environmental factors can impoverish people and drive displacement and migration, especially in the global South. These influences, including disasters, need not necessarily make people move but instead sometimes trap the poorest and the most vulnerable people in their places, exposed to hazards or make them migrate to even riskier places such as crowded and flood-prone urban slums. This book argues that restrictions placed on people's mobility options could increase their vulnerability and favours proactive migration policies. This timely contribution explains the climate hazard migration nexus in an accessible, engaging language for students of geography, development studies, politics and environmental studies as well as humanitarian and development practitioners and policymakers.

Agriculture, Rural Development, Food and Drug Administration, and Related Agencies

Appropriations for 2015 United States. Congress. House. Committee on Appropriations. Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies, 2014 [Pharmaceutical Economics and Policy](#)

Stuart O. Schweitzer, Z. John Lu, 2018-05-01 Pharmaceuticals constitute a relatively small share of the total healthcare expenditure in most developed economies and yet they play a critical role in the ongoing debate over how best to advance improve and afford healthcare Despite this and perhaps because of this the industry has had for many years an outsized claim to fame and controversy praise and criticisms support and condemnation Unfortunately many participants in the debate do not fully understand the complexities of the industry and its role in the overall healthcare system The analytical tools of economics provide a strong foundation for a better understanding of the dynamics of the pharmaceutical industry its contribution to health and healthcare its dual and often conflicting priorities of affordability and innovation as well as the various private and public policy initiatives directed at the sector This third edition of a uniquely comprehensive and balanced examination of the industry includes several new chapters on important topics such as the full fledged generics sector the arrival of biosimilars or generic biological drugs the global consolidation of manufacturers the evolving reimbursement landscape and the emergence of the world's most populous nations such as China India and Brazil as both suppliers and consumers of pharmaceutical products Other chapters have been fully rewritten or extensively updated covering such important topics as the cost efficiency of research and development pace of new innovations economic evaluation and value based pricing of drugs and public and private interventions in the industry [Deterrence](#) Anastasia Filippidou, 2020-01-16 Through the examination of different themes and subjects the book provides an in depth analysis of the concept of deterrence and its utility in dealing effectively with current threats Although the concept of deterrence precedes the Cold War in modern times and in its traditional form deterrence is seen as the product of the Cold War which transformed narrow deterrence approaches into widespread orthodoxy Increasingly however emerging threats and challenges call into question the traditional concept of deterrence There are many elements that challenge the concept of deterrence and its effectiveness For instance it is not just that the concept can be ambiguous and broad but also there have to be a number of conditions for it to be successfully implemented This collection contributes to a growing field of research in a relatively under studied area of interrogating the concept of deterrence itself through a multi disciplinary approach

Through the use of primary and secondary sources as well as interviews this book covers a wide range of disciplinary approaches on deterrence and the contributors cover a broad array of subjects The research assembled here focuses on deterring extremism conflict resolution and diplomacy investigating technological developments effects of globalisation social movements economics the relationship of resilience to effective deterrence and the associated complexity of contemporary interdependencies to create a contextualised concept of modern deterrence Social science and historical methodologies are utilized to gain a comprehensive cross section of analysis that will reveal the strengths and weaknesses of the use of deterrence as a national security strategy as well as highlighting the various types of power available for use by the state to create multi faceted deterrence in order to deal effectively and efficiently with complex emerging challenges

Bird Species Dieter Thomas Tietze, 2018-11-19 The average person can name more bird species than they think but do we really know what a bird species is This open access book takes up several fascinating aspects of bird life to elucidate this basic concept in biology From genetic and physiological basics to the phenomena of bird song and bird migration it analyzes various interactions of birds with their environment and other birds Lastly it shows imminent threats to birds in the Anthropocene the era of global human impact Although it seemed to be easy to define bird species the advent of modern methods has challenged species definition and led to a multidisciplinary approach to classifying birds One outstanding new toolbox comes with the more and more reasonably priced acquisition of whole genome sequences that allow causative analyses of how bird species diversify Speciation has reached a final stage when daughter species are reproductively isolated but this stage is not easily detectable from the phenotype we observe Culturally transmitted traits such as bird song seem to speed up speciation processes while another behavioral trait migration helps birds to find food resources and also coincides with higher chances of reaching new inhabitable areas In general distribution is a major key to understanding speciation in birds Examples of ecological speciation can be found in birds and the constant interaction of birds with their biotic environment also contributes to evolutionary changes In the Anthropocene birds are confronted with rapid changes that are highly threatening for some species Climate change forces birds to move their ranges but may also disrupt well established interactions between climate vegetation and food sources This book brings together various disciplines involved in observing bird species come into existence modify and vanish It is a rich resource for bird enthusiasts who want to understand various processes at the cutting edge of current research in more detail At the same time it offers students the opportunity to see primarily unconnected but booming big data approaches such as genomics and biogeography meet in a topic of broad interest Lastly the book enables conservationists to better understand the uncertainties surrounding species as entities of protection

Dragon Suit Gábor Holch, 2023-08-24. Worldwide business leaders who try to comprehend China's unavoidable impact on their livelihoods often ignore the most important voices: those of expatriate managers with years of experience in the country. Based on interviews with China-based corporate executives over five years, *Dragon Suit* brings to life the country's swarming cities, recent economic tsunami, unstoppable middle class, endemic pollution, intermittent internet, confusing culture, and endless opportunities. This book is a rare insight into the way global firms select, relocate, manage, motivate, and reward top managers in the world's most populous market. CEOs, C-suite executives, and senior managers recall their careers since China's early 2000s reform period until a notable 2014 policy paper declared the end of a golden age for foreign business in China, and beyond to the present day. *Dragon Suit* addresses crucial questions for international business: How did China become a key market for global firms? Why are most foreign managers unprepared for its challenges? Why did the country's near million foreigners begin to leave in the mid-2010s, and who will replace them? Most importantly, how can managers, entrepreneurs, experts, and students prepare for an increasingly China-facing future in business?
