The Pneumatic Flow Mixing Method Masaki Kitazume, 2016-11-03 The pneumatic flow mixing method was developed to stabilize dredged soil and surplus soil for promoting their beneficial use in 1999 The pneumatic flow mixing method is a new type of the ex situ cement stabilization techniques in which dredged soil and surplus soil is mixed with a relatively small amount of chemical binder without any mixing paddles and blades in a pipeline When a relatively large amount of compressed air is injected into the pipeline soil can be separated into small blocks When binder is injected into the pipeline the soil block and binder are thoroughly mixed by means of turbulent flow generated in the soil block during transporting As this method has many benefits rapid and large scale execution can be conducted with low cost it has been applied to many land reclamation projects backfilling behind earth retaining wall projects and shallow stabilization projects using dredged soils and surplus soils The Pneumatic Flow Mixing Method is a useful reference tool for engineers and researchers involved in admixture stabilization technology everywhere regardless of local soil conditions and a variety in applications

The deep mixing DM method developed in Japan and Sweden in the 1970s has gained popularity worldwide The DM improved ground is a composite system comprising stiff stabilized soil and unstabilized soft soil which necessitates geotechnical engineers to fully understand the interaction of stabilized and unstabilized soils and the engineering characteristics of in situ stabilized soil The success of the DM project cannot be achieved by the well determined geotechnical design alone but is guaranteed only when the quality and geometric layout envisaged in the design is realized in the field with an acceptable level of accuracy The process design production with careful quality control and quality assurance are the key issues in the DM project This book is intended to provide the state of the art and practice of quality control and assurance on deep mixing in detail based on the experience and research efforts accumulated in the past 50 years **Technical Abstract Bulletin** ,
