Robotic Welding, Intelligence and Automation Tzyh-Jong Tarn, Shan-Ben Chen, Gu Fang, 2011-04-25. This book shows some contributions presented in the 2010 International Conference on Robotic Welding, Intelligence and Automation (RWIA 2010), Oct 14-16, 2010, Shanghai, China. Welding handicraft is one of the most primordial and traditional techniques, mainly by manpower and human experiences. Weld quality and efficiency are therefore straightly limited by the welder's skill. In the modern manufacturing, automatic and robotic welding is becoming an inevitable trend. In recent years, the intelligentized techniques for robotic welding have a great development. The current teaching play-back welding robot is not with real-time functions for sensing and adaptive control of weld process. Generally, the key technologies on intelligentized welding robot and robotic welding process include computer vision and other information sensing, monitoring, and real-time feedback control of weld penetration and pool shape, and welding quality. Seam tracking is another key

technology for welding robot system Some applications on intelligentized robotic welding technology is also described in this book it shows a great potential and promising prospect of artificial intelligent technologies in the welding manufacturing
