multidisciplinary approach based on crucial elements such as sophisticated imaging techniques advanced anesthesiological and pharmacological strategies as well as updated surgical techniques and devices able to reduce ischemic injuries The book presents problems tackled from different perspectives by analyzing the main technical aspects of the surgical technique but also functional and metabolic issues It also discusses concepts such as ischemic preconditioning and ischemia reperfusion mechanisms as well as innovative investigational approaches In the endovascular era it highlights the most recent updates in complex endovascular repair involving renal and visceral arteries providing both practical tips and tricks and outcomes analyses The volume also addresses specific rarely reported problems in vascular surgery including issues in renal transplant oncologic surgery with involvement of splanchnic arteries and of the vena cava and use of the deep veins in aortic surgery This volume represents a powerful tool for both young and experienced operators who wish to approach the complex aortic pathology either by open surgery or through endovascular methods
