This book contains the fundamentals of a discipline which could be called Structural Analysis in Microelectronics and Fiber Optics. It deals with mechanical behavior of microelectronic and fiber optic systems and is written in response to the crucial need for a textbook for a first in depth course on mechanical problems in microelectronics and fiber optics. The emphasis of this book is on electronic and optical packaging problems and analytical modeling. This book is apparently the first attempt to select advance and present those methods of classical structural mechanics which have been or can be applied in various stress strain problems encountered in high technology engineering and some related areas such as materials science and solid state physics. The following major objectives are pursued in Structural Analysis in Microelectronic and Fiber Optic Systems: Identify structural elements typical for microelectronic and fiber optic systems and devices and introduce the student to the basic concepts of the mechanical behavior of microelectronic and fiber optic structures subjected to thermally induced or external loading. Select advance and present methods for analyzing stresses and deflections developed in microelectronic and fiber optic structures demonstrate the effectiveness of the methods and approaches of the classical structural analysis in the diverse mechanical problems of microelectronics and fiber optics and give students of engineering as well as practicing engineers and designers a thorough understanding of the main principles involved in the analytical evaluation of the mechanical behavior of microelectronic and fiber optic systems.

Selected Semiconductor Research

Ming-Fu Li, 2011. This book on solid state physics has been written with an emphasis on recent developments in quantum many body physics approaches. It starts by covering the classical theory of solids and electrons and describes how this classical model has failed. The authors then present the quantum mechanical model of electrons in a lattice and they also discuss the theory of conductivity. Extensive reviews on the topic are provided in a compact manner so that any non specialist can follow from the beginning. The authors cover the system of magnetism in a similar way and various problems in magnetic materials are discussed. The book also discusses the Ising chain, the Heisenberg model, the Kondo effect and superconductivity amongst other relevant topics. In the final chapter the authors present some works related to contemporary research topics such as quantum entanglement in many body systems and quantum simulations. They also include a short review of some of the possible applications of solid state quantum information in biological systems.
