MUHAMMAD USMAN KHALID, FARRUKH RASHID, WAQAR AKHTAR, MUHAMMAD HAROON GHURI, OMER LATEEF, 2014-08-13 Systems involving minimal contributions from person are more desired these days This trend leads to introduction of automation in the processes One such system is power system Engineers have to design power system considering all the load and generation variations all types of faults and outages possible that can damage power system and are harm to its reliability All this work seemed tedious but with the advent of time several great power system simulators were introduced that made all these analyses easy and fast One is Power System Simulator for Engineers PSS E which helps in system studies and gives responses quite real But yet running different analyses for the purpose of routine check of large power systems can take many hours and it needs expertise in the software as well So there is a need of much more simpler

method to perform all these analysis Luckily PSS E provides one such method It involves developing some module routine for every analysis through Python or Fortran

Modular Load Flow for Restructured Power Systems M.V. Hariharan,S.D. Varwandkar,Pragati P. Gupta,2018-03-31

In the subject of power systems authors felt that a re look is necessary at some conventional methods of analysis In this book the authors have subjected the time honoured load flow to a close scrutiny Authors have discovered and discussed a new load flow procedure Modular Load Flow

Modular Load Flow explores use of power a scalar as source for electrical circuits which are conventionally analysed by means of phasors the ac voltages or currents The method embeds Kirchhoff s circuit laws as topological property into its scalar equations and results in a unique wonderland where phase angles do not exist Generators are shown to have their own worlds which can be superimposed to obtain the state of the composite power system The treatment is useful in restructured power systems where stakeholders and the system operators may desire to know individual generator contributions in line flows and line losses for commercial reasons Solution in Modular Load Flow consists of explicit expressions which are applicable with equal ease to well conditioned ill conditioned and very low voltage situations It is found to be computationally much faster than the iterative load flows and indicates promise for online application Indian blackouts of July 30 and 31 2012 are analysed using an equivalent grid network to indicate its utility Besides its ability to deal with ground reality in power systems Modular Load Flow points to a theory that unveils interesting mathematical structures which should entice avid researchers Second author has had first author as teacher and third author as student The lecture notes therefore reflect ethos of three generations of teachers
