Textile-Based Advanced Materials Thomas Bechtold, Avinash P. Manian, 2021-03-17 Developments in the science and technology of textiles are not only limited to apparel and fashion. Certainly, there are research efforts aimed at improving the construction and processing of textiles for clothing, such as studies on cleaner production to reduce environmental impact, increasing the utilization of fibers and process chemicals from renewable resources, and on the recycling of materials from post-consumer waste apparel back into the manufacturing of new clothing articles. In addition, technological concepts developed for the creation of clothing over the centuries are now being investigated for use in a diverse array of fields, such as in the manufacture of engineering composites, personal protective equipment, and medicine. Further developments in other fields, such as electronics, nanotechnology, and information and communication technologies, are being investigated for their incorporation into apparel and clothing to create smart textiles. The aim of this Special Issue is to put together a collection of scientific reports on such efforts to highlight the range of scientific and technological issues that are being targeted and the ingenuity of the methodologies employed to find answers. It is hoped that readers of this issue will come away with an appreciation of the research being conducted in this area and perhaps gain inspiration for their own scientific endeavors.

Bioenergy Research: Integrative Solution for Existing Roadblock Manish Srivastava, Neha Srivastava, Rajeev Singh, 2021-06-30 This volume is fifth part of the five part set on bioenergy research. This edited volume provides sustainable solution for all existing roadblocks in commercial bioenergy production. The book focuses on different types of obstacles involved in various bioenergy operations with detail remedy of the issue in a sustainable way. In spite of having number of potential advantages, all available bioenergy options are still far from smooth practical applicability due to which they are still in pipeline phase to replace the fossil fuels. This book brings together the integrative approach to the readers to connect with more viable bioenergy type on commercial scale, the existing issues, and the feasible approaches to eliminate the bottlenecks in the process. Further, the book also uncovers the untouched area of bioenergy production technology by bringing forth unconventional methods, processes, and parameters which have scope to enhance biofuel production technology by Lab to Land methods. The book highlights aspects which are less studied or are very new in their industrial application of bioenergy production. The book presents relevant reading material for global researchers, academic institutions, research students, teachers, scientists, as well as industries. Other four volumes of this set explore basic concepts, latest progress, commercial opportunities, and bio waste to energy conversion.
