Neural Networks Haykin, 1994-01-01 *Manual for the Implementation of Neural Networks in MATLAB* Michael Kuhn, 2005

Neural Networks and Deep Learning Charu C. Aggarwal, 2018-08-25 This book covers both classical and modern models in deep learning The primary focus is on the theory and algorithms of deep learning The theory and algorithms of neural networks are particularly important for understanding important concepts so that one can understand the important design concepts of neural architectures in different applications Why do neural networks work When do they work better than off the shelf machine learning models When is depth useful Why is training neural networks so hard What are the pitfalls The book is also rich in discussing different applications in order to give the practitioner a flavor of how neural architectures are designed for different types of problems Applications associated with many different areas like recommender systems

machine translation image captioning image classification reinforcement learning based gaming and text analytics are covered The chapters of this book span three categories The basics of neural networks Many traditional machine learning models can be understood as special cases of neural networks An emphasis is placed in the first two chapters on understanding the relationship between traditional machine learning and neural networks Support vector machines linear logistic regression singular value decomposition matrix factorization and recommender systems are shown to be special cases of neural networks These methods are studied together with recent feature engineering methods like word2vec Fundamentals of neural networks A detailed discussion of training and regularization is provided in Chapters 3 and 4 Chapters 5 and 6 present radial basis function RBF networks and restricted Boltzmann machines Advanced topics in neural networks Chapters 7 and 8 discuss recurrent neural networks and convolutional neural networks Several advanced topics like deep reinforcement learning neural Turing machines Kohonen self organizing maps and generative adversarial networks are introduced in Chapters 9 and 10 The book is written for graduate students researchers and practitioners Numerous exercises are available along with a solution manual to aid in classroom teaching Where possible an application centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques

Elements of Artificial Neural Networks Kishan Mehrotra, Chilukuri K. Mohan, Sanjay Ranka, 1997 Elements of Artificial Neural Networks provides a clearly organized general introduction focusing on a broad range of algorithms for students and others who want to use neural networks rather than simply study them The authors who have been developing and team teaching the material in a one semester course over the past six years describe most of the basic neural network models with several detailed solved examples and discuss the rationale and advantages of the models as well as their limitations The approach is practical and open minded and requires very little mathematical or technical background Written from a computer science and statistics point of view the text stresses links to contiguous fields and can easily serve as a first course for students in economics and management The opening chapter sets the stage presenting the basic concepts in a clear and objective way and tackling important yet rarely addressed questions related to the use of neural networks in practical situations Subsequent chapters on supervised learning single layer and multilayer networks unsupervised learning and associative models are structured around classes of problems to which networks can be applied Applications are discussed along with the algorithms A separate chapter takes up optimization methods The most frequently used algorithms such as backpropagation are introduced early on right after perceptrons so that these can form the basis for initiating course projects Algorithms published as late as 1995 are also included All of the algorithms are presented using block structured pseudo code and exercises are provided throughout Software implementing many commonly used neural network algorithms is available at the book's website Transparency masters including abbreviated text and figures for the entire book are available for instructors using the text

Discover How to Build Your Own Neural Network From Scratch Even if You've Got Zero Math or Coding Skills. What seemed like a lame and unbelievable sci-fi movie a few decades ago is now a reality. Machines can finally think. Maybe not quite as complex as the human brain, but more than enough to make everyone's life a lot easier. Artificial neural networks based on the neurons found in the human brain give machines a brain patterned just like biological neurons. These software or hardware are a variety of the deep learning technology. With their help, you can make your computer learn by feeding it data which will then be generated as the output you desire. It is time to thank for the nanoseconds in which computers operate. It may be science, but it is not actually rocket science. Everyone can learn how to take advantage of the progressed technology of today, get inside the brain of the computers, and train them to perform the desired operations. They have been used in many different industries, and you can rest assured that you will find the perfect purpose for your own neural network. The best part about this book is that it doesn't require a college degree. Your high school math skills are quite enough for you to get a good grasp of the basics and learn how to build an artificial neural network. From non-mathematical explanations to teaching you the basic math behind the ANNs and training you how to actually program one, this book is the most helpful guide you will ever find. Carefully designed for you, the beginner, this guide will help you become a proud owner of a neural network in no time. Here's a Sneak Peak to What You'll Discover Inside this Book: The 6 unique benefits of neural networks. The difference between biological and artificial neural networks. And inside, look into ANN. Artificial Neural Networks. The industries ANN is used in. How to teach neural networks to perform specific commands. The different types of learning modalities, e.g. Hebbian Learning, unsupervised learning, supervised learning, etc. The architecture of ANN. Basic math behind artificial neurons.
