Explaining Physics Stephen Pople, 1987 The perfect grounding for students intending to take their studies to a more advanced level Features Introductory page to each unit to bring out the relevance of the material to everyday life Simple questions at the end of each unit to consolidate learning Helpful revision summary [Picturing Quantum Processes](#) Bob Coecke, Aleks Kissinger, 2017-03-16 The unique features of the quantum world are explained in this book through the language of diagrams setting out an innovative visual method for presenting complex theories Requiring only basic mathematical literacy this book employs a unique formalism that builds an intuitive understanding of quantum features while eliminating the need for complex calculations This entirely diagrammatic presentation of quantum theory represents the culmination of ten years of research uniting classical techniques in linear algebra and Hilbert spaces with cutting edge developments in quantum computation and foundations Written in an entertaining and user friendly style and including more than one hundred exercises this book is an ideal first course in quantum theory foundations and computation for students from undergraduate to PhD level as well as an opportunity for researchers from a broad range of fields from physics to biology linguistics and cognitive science to discover a new set of tools for studying processes and interaction **Categories**

for the Working Philosopher Elaine Landry, 2017-11-17 Often people have wondered why there is no introductory text on category theory aimed at philosophers working in related areas The answer is simple what makes categories interesting and significant is their specific use for specific purposes These uses and purposes however vary over many areas both pure e g mathematical foundational and logical and applied e g applied to physics biology and the nature and structure of mathematical models Borrowing from the title of Saunders Mac Lane s seminal work Categories for the Working Mathematician this book aims to bring the concepts of category theory to philosophers working in areas ranging from mathematics to proof theory to computer science to ontology from to physics to biology to cognition from mathematical modeling to the structure of scientific theories to the structure of the world Moreover it aims to do this in a way that is accessible to non specialists Each chapter is written by either a category theorist or a philosopher working in one of the represented areas and in a way that builds on the concepts that are already familiar to philosophers working in these areas
