the area of materials science yet they are not as popular among young readers or common people when compared to other materials like metals paper plastics rubber textiles ceramics and composites like concrete Most importantly much of the available literature in the form of papers specific review articles and books is targeted either at advanced readers scientists technologists engineers senior academicians or for those who are already familiar with the topic doctoral postdoctoral scholars For a beginner or even school college students such compilations are bit difficult to access digest In fact they need proper introduction to the topic of conducting polymers including their discovery preparation properties applications and societal impact using suitable examples and already known principles knowledge phenomenon Further active participation of readers in terms of question answers fill in the blanks numerical along with suitable answer key is necessary to maintain the interest and to initiate the thought process The readers also need to know about the drawbacks and any hazards of such materials Therefore I believe that a comprehensive source on the science technology of conducting polymers which maintains a link between grass root fundamentals and state of the art R D is still missing from the open literature
