Wireless Information Networks Solutions Manual Kaveh Pahlavan, 1998-02-01

Robust Signal Processing for Wireless Communications Frank Dietrich, 2007-10-25

Optimization of adaptive signal processing algorithms for wireless communications is based on a model of the underlying propagation channel. In practice, this model is never known perfectly. For example, its parameters have to be estimated and are only known with significant errors. In this book, a systematic treatment of this practical design problem is provided for signal processing in the physical layer with multiple antennas. The design of robust signal processing algorithms is based on a description of the errors and the uncertainties in the system's model. It applies principles of modern estimation, optimization, and information theory. Tutorial introductions to relevant literature and mathematical foundations give the necessary background and context to the reader. The book provides detailed derivations and enlightening insights into the related technical problems, covering the following topics in detail: An overview of the principles of training-based multiple input multiple output (MIMO) channel estimation; Robust minimax estimation of the wireless communication channel; Robust minimax prediction of the wireless communication channel based on the maximum Doppler frequency; Identification of channel and noise correlations; power delay profile; spatial and temporal correlations; spatial correlations of interference; Interpolation of band-limited autocovariance sequences; Robust linear and nonlinear precoding for the multi-user downlink with multiple antennas, which is based on incomplete channel state information or channel correlations; performance measures; duality; robust Tomlinson-Harashima precoding; robust vector precoding; nonlinear beamforming.

Wireless Communications Asrar Sheikh, 2012-10-13

Wireless communication systems since their inception in the form of cellular communications have spread rapidly throughout the western world and the trend is catching on in the developing countries as well These systems have caused revolutionary changes in the way we live Cellular Communications have become important both as means of communication and as a new domain of commercial enterprise Hand held telephones are now rapidly replacing the fixed telephone and in less than twenty years the number of subscribers has reached nearly three quarters of a billion In a short span of twenty years the cellular communications progressed from the first generation to the third generation systems which started operations in Japan on October 1 2001 The first generation wireless technology which was thought to be obsolete is now being used for fixed wired telephony in several countries of Asia Africa and Latin America As some commentator said in 1983 the cellular system is the best thing that has happened in telecommunications since the introduction of computers to the masses This book is written to provide readers with the fundamental concepts of wireless communications It is intended for a graduate course on wireless communications but it could be easily adopted at the senior level by skipping material involving difficult mathematical manipulations The text does not go through the rigorous material on mathematical treatment of electromagnetic waves and propagation rather it emphasizes more on the practical aspects of this
