Scientific and Technical Aerospace Reports, 1990. *The Optimal Homotopy Asymptotic Method* Vasile Marinca, Nicolae Herisanu, 2015-04-02. This book emphasizes in detail the applicability of the Optimal Homotopy Asymptotic Method to various engineering problems. It is a continuation of the book *Nonlinear Dynamical Systems in Engineering: Some Approximate Approaches* published at Springer in 2011, and it contains a great amount of practical models from various fields of engineering such as classical and fluid mechanics, thermodynamics, nonlinear oscillations, electrical machines, and so on. The main structure of the book consists of 5 chapters. The first chapter is introductory, while the second chapter is devoted to a short history of the development of homotopy methods, including the basic ideas of the Optimal Homotopy Asymptotic Method. The last three chapters, from Chapter 3 to Chapter 5, are introducing three distinct alternatives of the Optimal Homotopy Asymptotic Method with illustrative applications to nonlinear dynamical systems. The third chapter deals with the first alternative of our approach with two iterations. Five applications are presented from fluid mechanics and nonlinear oscillations. The Chapter 4 presents the Optimal Homotopy Asymptotic Method with a single iteration and solving the linear equation on the first approximation. Here are treated 32 models from different fields of engineering such as fluid mechanics, thermodynamics, nonlinear damped and undamped oscillations, electrical machines, and even from physics and biology. The last chapter is devoted to the Optimal Homotopy Asymptotic Method with a single iteration but without solving the equation in the first approximation. **The William Lowell Putnam Mathematical Competition** A. M. Gleason, R. E. Greenwood, L. M. Kelly, 2019-07-24. Back by popular demand, we are pleased to reissue this outstanding collection of problems and solutions from the Putnam Competitions covering the years 1938-1964. Problemists the world over, including all past and future Putnam Competitors, will revel in mastering the difficulties posed by this collection of problems from the first 25 William Lowell Putnam Competitions. Solutions to all 347 problems are given. In some cases, multiple solutions are included, some which

contestants could reasonably be expected to find under examination conditions and others which are more elegant or utilize more sophisticated techniques Valuable references and historical comments on many of the problems are presented The book concludes with four articles on the Putnam competition written by G Birkhoff L E Bush L J Mordell and L M Kelly which are reprinted from the American Mathematical Monthly There is great appeal here for all teachers students and all those who love good problems and see them as an entree to beautiful and powerful ideas
