 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large
 quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We
 common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what
 precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we
 find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular
 expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and
 Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon
 theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed

to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based
