Connecting a line out converter in parallel with speakers in use

Most line out converters can be used with speakers still connected. They can be wired in parallel with existing speakers at any point but doing so at the head unit is typically the best choice.

Connecting a line out converter without speakers in use

If needed, you can disconnect existing speakers and connect a LOC to unused speaker outputs if preferred. The LOC's internal resistance will act as a safe speaker load to the stereo or amp while producing a line level RCA output.
