Recent Developments in Micromechanics D.R. Axelrad,Wolfgang Muschik,2012-12-06 This volume contains the lectures presented at the mini symposium on Micromechanics held in conjunction with the CSME Mechanical Engineering Forum 1990 between the 3rd and 8th June 1990 at the University of Toronto Canada The expressed purpose of this symposium was to discuss some recent developments in the Micromechanics of Materials and how advances in this field now relate to the solution of practical engineering problems Due to the time limit set for this section of the

Engineering Forum as well as the restriction on the number of papers to be presented it was not possible to cover a much wider range of topics. However, an attempt was made to include the most important advances associated with the progress made in micromechanics in its application to material science and engineering over the past decade. Thus the topics are concerned with the fundamental aspects of the thermodynamics of structured solids: part I the micromechanical behaviour of alloys; part II the modelling of the material behaviour on the basis of continuum theory; part III and finally the important new approach to the characterization of various materials and their responses to external agencies by the use of probabilistic micromechanics; part IV. We would like to take this opportunity to thank the Chairman of the Organizing Committee Prof F P J Rimrott and the President of the CSME Prof T S.
