A standing wave pattern results in a string, rope or snakey as a result of the interaction between the waves introduced on one end with the reflections of the waves returning from the opposite end. At certain frequencies, a pattern will be established within the medium in which there are positions that always appear to be stationary. Midway between each of these stationary positions are positions which are undergoing rapid motion between a maximum positive and maximum negative displacement from their resting position.

1. The positions along the medium that appear to be stationary are known as _____. They are points of no displacement.
2. The positions along the medium that are undergoing rapid motion between a maximum positive and maximum negative displacement are known as _____. They are the opposite of the points of no displacement.
3. Label the nodes (N) and antinodes (AN) in the following standing wave patterns.

4. In each of the two diagrams of standing wave patterns, count the number of nodes and antinodes.

5. Each node is separated by the adjacent node by a distance that is equal to _____ wavelength.
6. Draw the standing wave patterns that would result on the string below if the string vibrated with the first, second, and third harmonic wave patterns. State the relationship between length and wavelength for each of the three patterns.

Audiology Review Preparing for the Praxis and Comprehensive Examinations is intended to serve as a review guide for audiology students and audiologists preparing for AuD program comprehensive examinations and the Audiology Praxis exam. The text can also serve as a resource for instructors teaching courses designed to review audiology content and prepare students for various types of formative or summative evaluations. Over 13 chapters topics related to audiology basics, diagnostics, treatment, research, and professional issues are reviewed. Unlike other Praxis study guides that lack audiology specific content and are comprised solely of review questions, this book provides a review of the main audiology content areas, case based examples, practice questions, and a full online practice test. Section I begins with a description of test question types, then discusses strategies to select an answer, and finally discusses techniques to utilize when taking the Praxis. Section II covers the fundamentals of audiology, auditory and vestibular anatomy, physiology, and disorders, psychoacoustics, principles of sound, and audiometric instrumentation, as well as information regarding the development of speech and language in individuals with typical and atypical hearing. Section III further discusses audiological diagnostic techniques for adult and pediatric patients, vestibular testing and interpretation, and differential diagnosis of auditory and vestibular disorders. Section IV is a review of the screening and identification methods for hearing and balance disorders, industrial audiology, and treatment practices for amplification, implantable devices, as well as audiological counseling and documentation. Section V concludes the book with a review of research information on evidence based practice and professional topics in audiology.
