Eclipsing Binary Stars: Modeling and Analysis Josef Kallrath, Eugene F. Milone, 2009-08-14 Have you ever stopped at a construction project on the way to your office and the day's astrophysics Remember the other onlookers folks just enjoying the spectacle as we all do in following developments away from our areas of active work We are excited and thrilled when the Hubble Space Telescope discovers an Einstein Cross when the marvelous pulsars enter our lives and when computer scientists put a little box on our desk that outperforms yesterday's giant machines We are free to make use of such achievements and we respect the imagination and discipline needed to bring them about just as onlookers respect the abilities and planning needed to create a building they may later use After all each of us contributes in our own areas as best as we can In addition to the serious onlookers there will be passersby who take only a casual look at the site They may use the building later but have little or no interest in its construction and give no thought to the resources needed to bring it to completion Upon arriving at work those persons write astronomy and astrophysics books at various levels in which they must say something about close binary stars Usually a page or two will do and the emphasis is on the MLR mass luminosity radius data obtained only from binaries

American Magazine, 1924 Advanced Electric Circuits A. M. P. Brookes, 2014-06-05 Advanced Electric Circuits deals with the concepts of advanced electric circuits and covers topics ranging from the symbolic method of analysis to network theorems bridge networks and tuned circuits and filters Polyphase circuits non sinusoidal and transient excitation and valves and transistors as circuit elements are also discussed along with elementary transmission line analysis Comprised of nine chapters this book begins with an overview of the j method of solving circuit problems and the various ways in which the vectors can be expressed so that the most suitable form may be chosen for any particular problem The application of the four basic algebraic processes addition subtraction multiplication and division to vectors in the j rotation is also considered The discussion then turns to bridge networks tuned circuits and filters and polyphase circuits The remaining chapters focus on non sinusoidal and transient excitation valves and transistors as circuit elements and elementary transmission lines This monograph will be of interest to electricians electrical engineers and students of electrical engineering courses
