Schrader, Anthony N. Michel, 2010-07-08 Life has many surprises One of the best surprises is meeting a caring mentor an encouraging collaborator or an enthusiastic friend This volume is a tribute to Professor Michael K Sain who is such a teacher colleague and friend On the beautiful fall day of October 27 2007 friends families colleagues and former students gathered at a workshop held in Notre Dame Indiana This workshop brought together many people whose lives have been touched by Mike to celebrate his milestone 70th birthday and to congratulate him on his contributions in the fields of systems circuits and control Mike was born on March 22 1937 in St Louis Missouri After obtaining his B S E E and M S E E at St Louis University he went on to study at the University of Illinois at Urbana Champaign for his doctoral degree With his Ph D degree complete he came to the University of Notre Dame in 1965 as an assistant professor He became an associate professor in 1968 a full professor in 1972 and the Frank M Freimann Chair in Electrical Engineering in 1982 He has remained at and loved the University of Notre Dame for over 40 years Mike also held a number of consulting jobs throughout his career Most notably he consulted with the Energy Controls Division of Allied Bendix Aerospace from 1976 to 1988 and the North American Operations branch of the Research and Development Laboratory of General Motors Corporation for a decade 1984 1994 **Identification and System Parameter Estimation**

Saridis, 2016-06-06 Identification and System Parameter Estimation 1982 covers the proceedings of the Sixth International Federation of Automatic Control IFAC Symposium The book also serves as a tribute to Dr Naum S Rajbman The text covers issues concerning identification and estimation such as increasing interrelationships between identification estimation and other aspects of system theory including control theory signal processing experimental design numerical mathematics pattern recognition and information theory The book also provides coverage regarding the application and problems faced by several engineering and scientific fields that use identification and estimation such as biological systems traffic control geophysics aeronautics robotics economics and power systems Researchers from all scientific fields will find this book a great reference material since it presents topics that concern various disciplines

Integrated Process Design and Operational Optimization via Multiparametric Programming Baris Burnak, Nikolaos A. Diangelakis, Efstratios N. Pistikopoulos, 2022-06-01 This book presents a comprehensive optimization based theory and framework that exploits the synergistic interactions and tradeoffs between process design and operational decisions that span different time scales Conventional methods in the process industry often isolate decision making mechanisms with a hierarchical information flow to achieve tractable problems risking suboptimal even infeasible operations In this book foundations of a systematic model based strategy for simultaneous process design scheduling and control optimization is detailed to achieve reduced cost and improved energy consumption in process systems The material covered in this book is

well suited for the use of industrial practitioners academics and researchers In Chapter 1 a historical perspective on the milestones in model based design optimization techniques is presented along with an overview of the state of the art mathematical tools to solve the resulting complex problems Chapters 2 and 3 discuss two fundamental concepts that are essential for the reader These concepts are i mixed integer dynamic optimization problems and two algorithms to solve this class of optimization problems and ii developing a model based multiparametric programming model predictive control These tools are used to systematically evaluate the tradeoffs between different time scale decisions based on a single high fidelity model as demonstrated on i design and control ii scheduling and control and iii design scheduling and control problems We present illustrative examples on chemical processing units including continuous stirred tank reactors distillation columns and combined heat and power regeneration units along with discussions of other relevant work in the literature for each class of problems

Robust Industrial Control Systems Michael J. Grimble, 2006-05-01 Robust Industrial Control Systems Optimal Design Approach for Polynomial Systems presents a comprehensive introduction to the use of frequency domain and polynomial system design techniques for a range of industrial control and signal processing applications The solution of stochastic and robust optimal control problems is considered building up from single input problems and gradually developing the results for multivariable design of the later chapters In addition to cataloguing many of the results in polynomial systems needed to calculate industrial controllers and filters basic design procedures are also introduced which enable cost functions and system descriptions to be specified in order to satisfy industrial requirements Providing a range of solutions to control and signal processing problems this book Presents a comprehensive introduction to the polynomial systems approach for the solution of H_2 and H_∞ optimal control problems Develops robust control design procedures using frequency domain methods Demonstrates design examples for gas turbines marine systems metal processing flight control wind turbines process control and manufacturing systems Includes the analysis of multi degrees of freedom controllers and the computation of restricted structure controllers that are simple to implement Considers time varying control and signal processing problems Addresses the control of non linear processes using both multiple model concepts and new optimal control solutions Robust Industrial Control Systems Optimal Design Approach for Polynomial Systems is essential reading for professional engineers requiring an introduction to optimal control theory and insights into its use in the design of real industrial processes Students and researchers in the field will also find it an excellent reference tool

Mathematical System Theory Athanasios C. Antoulas, 2013-04-17 Over the past three decades R E Kalman has been one of the most influential personalities in system and control theory His ideas have been instrumental in a variety of areas This is a Festschrift honoring his 60th birthday It contains contributions from leading researchers in the field giving an account of the profound influence of his ideas in a number of areas of active research in system and control theory For example since their introduction by Kalman in the early 60 s the concepts of controllability and observability of dynamical

systems with inputs have been the corner stone of the great majority of investigations in the field *State Space Modeling of Time Series* Masanao Aoki,2013-03-09 In this book the author adopts a state space approach to time series modeling to provide a new computer oriented method for building models for vector valued time series This second edition has been completely reorganized and rewritten Background material leading up to the two types of estimators of the state space models is collected and presented coherently in four consecutive chapters New fuller descriptions are given of state space models for autoregressive models commonly used in the econometric and statistical literature Backward innovation models are newly introduced in this edition in addition to the forward innovation models and both are used to construct instrumental variable estimators for the model matrices Further new items in this edition include statistical properties of the two types of estimators more details on multiplier analysis and identification of structural models using estimated models incorporation of exogenous signals and choice of model size A whole new chapter is devoted to modeling of integrated nearly integrated and co integrated time series *Nonlinear Control Systems Design 1992* M. Fliess,2016-07-07 This volume represents most aspects of the rich and growing field of nonlinear control These proceedings contain 78 papers including six plenary lectures striking a balance between theory and applications Subjects covered include feedback stabilization nonlinear and adaptive control of electromechanical systems nonholonomic systems Generalized state space systems algebraic computing in nonlinear systems theory decoupling linearization and model matching and robust control are also covered *Invariance and System Theory* Allen Tannenbaum,2006-11-14 **Commemorative Issue to Celebrate the Life and Work of Prof. Roger W.H. Sargent** Rafiqul Gani ,Ian Cameron,2020-12-29 This book celebrates the life work and influence of Professor Roger W H Sargent of Imperial College London It does so through a range of original contributions that span the wide academic and industry interests of Professor Sargent Roger Sargent passed away in late 2018 but his legacy lives on through his enormous academic tree which traces to the early 1960s That huge body of work has also had significant impacts on industrial practices Roger was regarded as the father of Process Systems Engineering PSE This area of Chemical Engineering continues to influence the modelling design control optimization and integrated performance of industrial and related processes This book highlights some of those impacts and the ongoing importance of PSE in helping to solve some of the grand challenges of our time *Nonlinear Systems and Matrix Analysis - Recent Advances in Theory and Applications* Peter Chen,Victor Martinez-Luaces,2024-11-27 Nonlinear system analysis is of interest to engineers sociologists physicists mathematicians and many other scientists since most systems are inherently nonlinear in nature In mathematics a nonlinear system does not satisfy the superposition principle such as in a linear system Therefore the theories underlining nonlinear analysis and their applications need to be developed on their own merit The first section of this book is a collection of examples reporting recent advances in both theory and applications of nonlinear system analysis The contents of each chapter will provide in depth foresight to interested readers As numerical linearization to a set of matrix equations is still the

principal method used to solve a nonlinear system matrix analysis is the topic of the second section of this book The matrices have invaded practically all areas of mathematics the experimental and social sciences engineering and technology This volume updates purely mathematical theoretical aspects and it also presents concrete examples of the wide range of applications of matrix theory in other disciplines Dynamic Modelling and Control of National Economies 1989 N.M.
