Wilson, 2013-12-04 What are the challenges and potential pitfalls of real research What decision making process is followed by successful researchers The Research Process in Sport Exercise and Health fills an important gap in the research methods literature Conventional research methods textbooks focus on theory and descriptions of hypothetical techniques while the peer reviewed research literature is mainly concerned with discussion of data and the significance of results In this book a team of successful researchers from across the full range of sub disciplines in sport exercise and health discuss real pieces of research describing the processes they went through the decisions that they made the problems they encountered and the things they would have done differently As a result the book goes further than any other in bringing the research process to life helping students identify potential issues and problems with their own research right at the beginning of the process The book covers the whole span of the research process including identifying the research problem justifying the research question choosing an appropriate method data collection and analysis identifying a study's contribution to knowledge and or applied practice disseminating results Featuring real world studies from sport psychology biomechanics sports coaching ethics in sport sports marketing health studies sport sociology performance analysis and strength and conditioning the book

is an essential companion for research methods courses or dissertations on any sport or exercise degree programme
