The Australopithecine Face Yoel Rak:

The Australopithecine Face Yoel Rak, 2014-05-10 The Australopithecine Face provides an introduction to the interpretation of the facial skeleton of Australopithecus a part of the anatomy well represented in the African collections This book presents important morphological differences between the early hominid taxa and interprets them in a biochemical functional evolutionary framework Organized into seven chapters this book begins with an overview of the description of the face of the four species of Australopithecus extending to comparisons both within the genus and with other primates This text then provides an analysis of the facial morphology of Australopithecus in terms of structural significance Other chapters consider the taxonomic and phylogenetic status of the australopithecine species in light of the description and comparison This book discusses as well the changes in the morphology and topography of the facial mask The final chapter deals with the phylogenetic assignment of the different species This book is a valuable resource for anthropologists **"The"**

Australopithecine Face Yoel Rak, 1983 *Human Paleontology and Prehistory* Assaf Marom, Erella Hovers, 2017-01-24 The aim of the book is to present original and though provoking essays in human paleontology and prehistory which are at the forefront of human evolutionary research in honor of Professor Yoel Rak a leading scholar in paleoanthropology The volume presents a collection of original papers contributed by many of Yoel's friends and colleagues from all over the globe Contributions from experts around the globe fall roughly into three broad categories Reflections on some of the broad theoretical questions of evolution and especially about human evolution the early hominins with special emphasis on Australopithecus afarensis and Paranthropus and the Neanderthals that contentious group of our closest extinct relatives Within and across these categories nearly every paper addresses combinations of methodological analytical and theoretical questions that are pertinent to the whole human evolutionary time span This book will appeal most to scholars and advanced students in paleoanthropology human paleontology and prehistoric archaeology **Current Catalog** National Library of Medicine (U.S.), *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1985 **From Lucy to Language** Donald C. Johanson, Blake Edgar, 1996 Now revised and updated this groundbreaking volume by one of the world's foremost paleontologists presents the most complete visual proof ever assembled of the evidence for human evolution displaying in full color all the key fossils and artifacts of human prehistory *A Photographic Atlas for Physical Anthropology* Paul Frederick Whitehead, 2005 Nature Sir Norman Lockyer, 1869 *The Skull of ^IAustralopithecus afarensis^R* William H. Kimbel, Yoel Rak, Donald C. Johanson, 2004-03-11 The book is the most in depth account of the fossil skull anatomy and evolutionary significance of the 3 6 3 0 million year old early human species Australopithecus afarensis Knowledge of this species is pivotal to understanding early human evolution because 1 the sample of fossil remains of A afarensis is among the most extensive for any early human species and the majority of remains are of taxonomically informative skulls and teeth 2 the wealth of material makes A afarensis an indispensable point of reference for the

interpretation of other fossil discoveries 3 the species occupies a time period that is the focus of current research to determine when where and why the human lineage first diversified into separate contemporaneous lines of descent Upon publication of this book this species will be among the most thoroughly documented extinct ancestors of humankind The book details the comparative anatomy of the new skull and the cast of its brain analyzed by R Holloway and M Huan as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar and analyzes the evolutionary significance of A afarensis in the context of other critically important discoveries of earliest humans made in recent years In essence it summarizes the state of knowledge about one of the central subjects of current paleoanthropological investigation

A Companion to Paleoanthropology David R. Begun, 2012-12-20 A Companion to Paleoanthropology presents a compendium of readings from leading scholars in the field that define our current knowledge of the major discoveries and developments in human origins and human evolution tracing the fossil record from primate and hominid origins to the dispersal of modern humans across the globe Represents an accessible state of the art summary of the entire field of paleoanthropology with an overview of hominid taxonomy Features articles on the key discoveries in ape and human evolution in cranial postcranial and brain evolution growth and development Surveys the breadth of the paleontological record from primate origins to modern humans Highlights the unique methods and techniques of paleoanthropology including dating and ecological methods and use of living primate data to reconstruct behavior in fossil apes and humans

The Social Cage Alexandra Maryanski, Jonathan H. Turner, 1992 The authors assert that traditional sociological theories of human nature and society do not pay sufficient attention to the evolution of big brained hominoids resulting in assumptions about humans propensity for groupness that go against the record of primate evolution When this record is analyzed in detail and is supplemented by a review of the social structures of contemporary apes and the basic types of human societies hunter gathering horticultural agrarian and industrial commonplace criticisms about the de humanizing effects of industrial society appear overdrawn if not downright incorrect The book concludes that the mistakes in contemporary social theory as well as much of general social commentary stem from a failure to analyze humans as big brained apes with certain phylogenetic tendencies This failure is usually coupled with a willingness to romanticize societies of the past notably horticultural and agrarian systems

Functional Inference in Paleoanthropology David J. Daegling, 2022-01-04 In this deep examination of functional morphology a renowned paleoanthropologist offers a new way to investigate human evolution through the fossil record It is common for two functional anatomists to examine the exact same fossil material yet argue over its evolutionary significance How can this be Traditionally paleoanthropology has interpreted hominin fossil morphology by first considering the ecological challenges hominins faced then drawing adaptive inferences based on the idea that skeletal morphology is largely a reflection of paleoecology In Functional Inference in Paleoanthropology innovative paleoanthropologist David J Daegling suggests that researchers can resolve dichotomous

interpretations of the fossil record by instead focusing on the biology and development of the bones themselves such as measurable responses to deformations stresses and damage Critically exploring how scientists probe and interpret fossil morphology for behavioral and adaptive inferences Daegling makes the case that an intelligible science of functional morphology in the fossil record is impossible without the inclusion of this mechanobiological perspective Drawing on historical examples from long standing debates on the emergence of bipedality and the dietary shifts that facilitated the emergence of the hominin clade Daegling traces the disjunctions between theoretical principles of comparative morphology and methodological practice in the paleontological context of human evolution Sharing rich findings from recent decades of research in skeletal biomechanics Functional Inference in Paleoanthropology examines how bone adapts over the lifespan what environmental factors influence its quality and how developmental constraints limit the skeleton s adaptive potential over evolutionary time

Making Silent Stones Speak Kathy D. Schick,Nicholas Patrick Toth,1994-02-03 In this dramatic reconstruction of the daily lives of the earliest tool making humans two leading anthropologists reveal how the first technologies stone wood and bone tools forever changed the course of human evolution Drawing on two decades of fieldwork around the world authors Kathy Schick and Nicholas Toth take readers on an eye opening journey into humankind s distant past traveling from the savannahs of East Africa to the plains of northern China and the mountains of New Guinea offering a behind the scenes look at the discovery excavation and interpretation of early prehistoric sites Based on the authors unique mix of archaeology and practical experiments ranging from making their own stone tools to theorizing about the origins of human intelligence Making Silent Stones Speak brings the latest ideas about human evolution to life
