2. Spindle Speed Control Handles.

At the left front of the headstock, Fig 3 is the three position shift handle.

Immediately above, on the front of the headstock, is the Direct Reading Spindle Speed Chart.

The desired spindle speed is obtained by :

- (1) Placing the three position shift handle in one of the three positions;
- (2) Moving the high-low shift handle to either the high or low range;
- (3) Running the input V-belt over either the slow or the fast pulley. (Always run belt off headstock pulley first as it is made with shallow grooves for this purpose).

The resultant spindle speed may be noted directly from the chart.

For free hand rotation of the spindle, move the High-Low shift handle to its neutral position.

Do not operate the shift handles while the spindle is revolving.
