

ADMINISTRATION AND SCORING

Either scale can be used by itself. However, when using both together, it is recommended that the State-anxiety form be administered first (Spielberger *et al.*, 1970). The inventory is self-administering (either individually or in groups). Though there is no time limit, completion of both forms seldom requires more than twenty minutes.

In both forms some of the items are worded in such a way that a response of 1 indicates little anxiety or absence of anxiety, and a response of 4 indicates high anxiety. Other items are worded so that a response of 1 would indicate high anxiety. The simplest way to score either scale is to add the ratings given to the direct items and reversed items and subtract the sum of the reversed items from the sum of the direct items and to add a constant. If the subject fails to respond to one or more items, a complicated procedure for scoring has been recommended (Spielberger *et al.*, 1970). It should be mentioned here that all the subjects used in the present study understood very well the instructions given to them while filling in these forms, and none of them failed to answer any one of those items mentioned in both the forms.

The score for either form can range from 20 to 80, the higher the score the greater is the level of anxiety. To reduce the potential influence of an acquiescence set on STAI responses, it would be desirable to have balanced A-State and A-Trait scales, with equal numbers of items for which high ratings indicate high and low anxiety. The STAI A-State scale is balanced for acquiescence set, with ten directly scored and ten reversed items. It was not possible, however, to develop a balanced A-Trait scale from the original item pool; the STAI A-Trait scale has seven reversed items and thirteen that are scored directly. The reversed items on the STAI subscales are:

A-State scale: 1, 2, 5, 8, 10, 11, 15, 16, 19 and 20.

A-Trait scale: 1, 6, 7, 10, 13, 16, and 19.

Templates are available for scoring the STAI A-Trait and A-State scales by hand. To score each scale, place the appropriate template on the test form and add the response values printed on the key for each item. This is most conveniently done with a simple hand counter, but one may also use an adding machine, a desk calculator, or do the adding in his head. Make certain that the correct template is used to score the STAI A-State and A-Trait scales. The

Ravdin, Heather L. Katzen, 2012-09-14 With the aging of the baby boomers and medical advances that promote longevity older adults are rapidly becoming the fastest growing segment of the population As the population ages so does the incidence of age related disorders Many predict that 15% 20% of the baby boomer generation will develop some form of cognitive decline

over the course of their lifetime with estimates escalating to up to 50% in those achieving advanced age. Although much attention has been directed at Alzheimer's disease, the most common form of dementia, it is estimated that nearly one third of those cases of cognitive decline result from other neuropathological mechanisms. In fact, many patients diagnosed with Alzheimer's disease likely have co-morbid disorders that can also influence cognition, i.e. vascular cognitive impairment, suggesting mixed dementias are grossly under-diagnosed. The Clinical Handbook on the Neuropsychology of Aging and Dementia is a unique work that provides clinicians with expert guidance and a hands-on approach to neuropsychological practice with older adults. The book will be divided into two sections: the first addressing special considerations for the evaluation of older adults and the second half focusing on common referral questions likely to be encountered when working with this age group. The authors of the chapters are experts and are recognized by their peers as opinion leaders in their chosen chapter topics. The field of neuropsychology has played a critical role in developing methods for early identification of late-life cognitive disorders as well as the differential diagnosis of dementia. Neuropsychological assessment provides valuable clinical information regarding the nature and severity of cognitive symptoms associated with dementia. Each chapter will reinforce the notion that neuropsychological measures provide the clinician with sensitive tools to differentiate normal age-related cognitive decline from disease-associated impairment and aid in differential diagnosis of cognitive dysfunction in older adults as well as identify cognitive deficits most likely to translate into functional impairments in everyday life.

Assessment Scales in Depression and Anxiety - CORPORATE Raymond W. Lam, Erin E. Michalaak, Richard P.

Swinson, 2006-08-08 There are a number of books recently published on assessment scales for depression and anxiety. However, these books are generally more detailed than clinicians require; are specific to one or other condition or involve specialty populations such as children or geriatrics. To meet the needs of clinicians treating patients with depressive and anxiety disorders, this volume aims to bring together empirically validated assessment scales. In a concise and user-friendly format, *Assessment Scales in Depression and Anxiety* illustrates the assessment scales used in clinical trials and research studies, shows how to select an assessment scale and to decide which scale to use for a particular clinical situation, and provides sample assessment scales for clinicians to use in their practice.

Clinical Trials in Psychopharmacology Marc Hertzman, Lawrence Adler, 2010-03-16 Although clinical trials were virtually unheard of in psychiatry for many years, they are now the gold standard for judging whether drugs are safe and useful. But should they be? What is the true status of clinical trials? Even when they ostensibly demonstrate a benefit of a certain treatment, the strict patient selection criteria, poor compliance, and high drop-out rate leave the conclusions open to question. Are the new treatments really better or more cost-effective than the old? Do they have fewer side effects? In this book, the authors take a critical look at recent developments and present a series of trenchant and challenging observations. Section I examines the significant changes in law and the regulatory environment that have occurred during the past ten years. Has fossilization handicapped the US Food and Drug

Administration in promoting treatment advances How can the plethora of findings be regulated This is particularly pertinent in genomic studies and there are two chapters addressing the impact of genomics on psychiatric research This section also addresses the role of women in drug trials a group long excluded but now demanding a part for without testing how can optimal treatments be devised The next two Sections highlight clinical trials in the major areas of psychiatric pharmacological treatment including Mood Disorders especially Bipolar Anxiety Disorders and addictions Chapters on pharmacological treatments for Eating Disorders Attention Deficit Disorder Autism and Asperger s Syndrome and Impulse Control Disorder represent the latest thinking on these subjects The final Section contains a consummate example of out of the Western box thinking namely consideration of herbal medicines used by a large number of patients with or without medical supervision We conclude with a close look at the problem of side effects then selected thoughts about methodology Clearly written the text provides immediate access to new developments across the spectrum of drug testing Clinical Trials in Psychopharmacology A Better Brain is provocative reading for psychiatrists pharmacologists and all those interested in improved drug treatments for patients with mental illness Raises questions about the conduct of trials and the credibility of their outcomes that are relevant not just in psychiatry but all areas of medicine Discusses the ethical problems in assessing outcomes in humans including children

Dysregulation of Autonomic Cardiac Control by Traumatic Stress and Anxiety J. P. Ginsberg, 2016-08-05 Current understanding of the interplay between sympathetic and parasympathetic influences on cardiac response to environmental stimuli and subsequent response selection e g maintenance of resting homeostasis mobilization of defensive response task performance tonic immobilization and or affiliation will be explored Reference will be made to how these processes conjoin with proposed polyvagal theory Cardiac adjustments to environmental stimuli affect the internal physiological state of the organism as well as the quality of information processing that the individual can perform during the stimulus appraisal stage of the orienting response Bradyrdia is adaptive in early stages of orientation to novel or potential threat while greater HRV power serves to facilitate self regulation stimulus information processing and appraisal and appropriate response selection This issue is devoted to current research findings on how normal patterns of cardiac autonomic regulation of HRV are disrupted in PTSD impairing sustained attention to the environment and increasing the rate of inappropriate responding to stimuli Origins of our current state of understanding in the intake rejection hypothesis will be considered and how the intake

rejection hypothesis has morphed into present day Optimal Performance practice. Additionally, empirical data where available will be presented on how dysregulation of the normal pattern of cardiac autonomic regulation by PTSD impairs sustained attention to the environment and increases the rate of inappropriate responding to stimuli through disinhibition, poor impulse control, emotional withdrawal, overarousal, and attentional bias. Current research findings are sought that address in controlled experimental and clinical trials the restorative effects of HRV biofeedback on HRV power and how increases in HRV power relate to improved attention, immediate memory, and self-regulation of affect using outcome measures of cognition, symptoms of PTSD and depression, stress perception, and level of adaptive function.
