Ecology and Behaviour of the African Buffalo H.H.T Prins, 2012-12-06 Over the past 30 years or so research effort in behaviour and ecology has progressed from simple documentation of the habits or habitats of different species to asking more searching questions about the adaptiveness of the patterns of behaviour observed moved from documenting simply what occurs to trying to understand why Increasingly studies of behaviour or ecology explore the function of particular responses or patterns of behaviour in individuals or populations looking for the adaptiveness that has led to the adoption of such patterns either at a proximate level what environmental circumstances have favoured the adoption of some particular strategy or response from within the animal's repertoire at that specific time or at an evolutionary level speculating upon what pressures have led to the inclusion of a particular pattern of behaviour within the repertoire in the first place Many common principles have been established common to a wide diversity of animal groups yet showing some precise relationship between a given aspect of behaviour or population dynamics and some particular ecological factor In particular tremendous advances have been made in understanding the foraging behaviour of animals and the decision rules by which they seek and select from the various resources on offer and patterns of social organization and behaviour the adaptiveness of different social structures group sizes or reproductive tactics

Geotechnics in the African Environment, volume 1 Geoffrey E. analysis of the current state of the African economy and makes constructive suggestions about its future direction The contributors argue that despite enduring challenges such as food security and employment creation Africa faces a brighter future in sustainable growth provided that governance and policy making are effectively employed to maintain peace achieve greater regional collaboration and encourage private sector competitiveness **The African Mother Tongue and**

Mathematical Ideas Abdul Karim Bangura,2020-06-02 This book by renowned scholar Dr Abdul Karim Bangura combines linguistics and mathematics to show how and why African centred mathematical ideas can be a driving force in Africa s development efforts Bangura explores the concept that Africa has been the centre of the History of Mathematics for thousands of years as the civilizations that emerged across the continent developed contributions which would enrich both ancient and modern understanding of nature through mathematics However scholars and other professionals working in the field of mathematics education in Africa have identified a plethora of issues in carrying out their tasks This is highlighted by one of the most compelling arguments in the book which is that a major reason for these problems is the fact that the African mother tongues has been greatly neglected in the teaching of mathematics in the continent Bangura asserts that a change has to be made in order for Africa to benefit from the exceptional opportunities mathematics offer showing that even if there is a great body of work connecting linguistics and mathematics few analyses have been performed on the link between African languages and mathematics and the ones that have been made are not theoretically grounded on linguistics Thus the book begins by identifying the objects of study of linguistics and mathematics and delineates which ones they have in common Next since the object of study of linguistics is language the nine design features of language are employed to examine each of the objects as it pertains to African languages After that mathematical ideas of sustainability and those of tipping points are suggested as means to help Africa s development efforts *The African American Urban Experience* J.

Trotter,E. Lewis,T. Hunter,2004-03-17 From the early years of the African slave trade to America blacks have lived and laboured in urban environments Yet the transformation of rural blacks into a predominantly urban people is a relatively recent phenomenon only during World War One did African Americans move into cities in large numbers and only during World War Two did more blacks reside in cities than in the countryside By the early 1970s blacks had not only made the transition from rural to urban settings but were almost evenly distributed between the cities of the North and the West on the one hand and the South on the other In their quest for full citizenship rights economic democracy and release from an oppressive rural past black southerners turned to urban migration and employment in the nation s industrial sector as a new Promised Land or Flight from Egypt In order to illuminate these transformations in African American urban life this book brings together urban history contemporary social cultural and policy research and comparative perspectives on race ethnicity and nationality within and across national boundaries Brenner and Rector's The Kidney E-Book Alan S. Research Note PSW. ,1982 Justified Modeling Frameworks and Novel Interpretations of Ecological and Epidemiological Systems Bapan Ghosh,Salih Djilali,Asep K. Supriatna,2024-01-12 The Lotka Volterra and the Kermack McKendrick models are well celebrated and widely recognized in the field of ecology and epidemiology Several modified ordinary differential equation models have been proposed over the last many decades to rationalize complex biological phenomena In the current century researchers have paid much attention to developing new modeling frameworks with delay differential equations difference equations fractional order systems stochastic differential equations etc No doubt these models have emerged many new bifurcations theory and methods which have equally contributed to the advances of Mathematics and interdisciplinary research It is argued that these new modeling frameworks perform more effectively in analyzing and interpreting results compared to the conventional modeling frameworks with ordinary differential equations However implications of emerged bifurcations from new modeling approaches are often less interpreted from a biological viewpoint Even there is also a lack of understanding of how a fractional order model for instance displays a more realistic scenario to analyze a biological process Therefore a more serious justification is essential while modeling any biological event
