Eugene Osburn,2012-12-06 One learns medicine including pediatrics by first learning a set of rules and then spending the rest of his her productive career discovering exceptions to those rules This book is intended to serve as a study guide for organizing the acquisition of an initial foundation of information about pediatric topics Without an initial set of rules all new information is simply another new rule and not an interpretive frame of reference for the deeper level of understanding that occurs with recognition that one is dealing with a change in his previously held belief As such I have attempted to include what I think most would agree are commonly held operational facts of pediatrics and have not tried to justify or substantiate the facts with references or lengthy background information as to why these facts are currently thought to be true My primary intent in writing this book is to provide an adequate core of pediatric information to enable one to pass the pediatric portion of the national boards I hope it will also provide a foundation for those who wish to spend more time discovering why children are different If this study guide fulfills whichever of these needs is yours it will have been successful A Eugene Osburn
