Undergraduate Instrumental Analysis 8th Edition provides the reader with an understanding of all major instrumental

analyses and is unique in that it starts with the fundamental principles and then develops the level of sophistication that is

needed to make each method a workable tool for the student Each chapter includes a discussion of the fundamental

principles underlying each technique detailed descriptions of the instrumentation and a large number of applications Each

chapter includes an updated bibliography and problems and most chapters have suggested experiments appropriate to the

technique This edition has been completely updated revised and expanded The order of presentation has been changed from

the 7th edition in that after the introduction to spectroscopy UV Vis is discussed This order is more in keeping with the

preference of most instructors Naturally once the fundamentals are introduced instructors are free to change the order of

presentation Mathematics beyond algebra is kept to a minimum but for the interested student in this edition we provide an

expanded discussion of measurement uncertainty that uses elementary calculus although a formula approach can be used

with no loss of context Unique among all instrumental analysis texts we explicitly discuss safety up front in Chapter 2 The

presentation intentionally avoids a finger wagging thou shalt not approach in favor of a how to discussion of good laboratory

and industrial practice It is focused on hazards and remedies that might be encountered in the use of instrumentation Among

the new topics introduced in this edition are Photoacoustic spectroscopy Cryogenic NMR probes and actively shielded

magnets The nature of mixtures in the context of separations Troubleshooting and leaks in high vacuum systems such as

mass spectrometers Instrumentation laboratory safety Standard reference materials and standard reference data In addition

the authors have included many instrument manufacturer s websites which contain extensive resources We have also

included many government websites and a discussion of resources available from National Measurement Laboratories in all

industrialized countries Students are introduced to standard methods and protocols developed by regulatory agencies and

consensus standards organizations in this context as well
