

In-service Inspection

Inspection is a critical part of the maintenance program for any crane. It is the only way to ensure that the crane is in good working order and that any problems are identified and corrected before they become major issues. The inspection should be performed by a qualified person and should include a visual inspection of the crane and its components, as well as a functional test of the crane's operation.

Applicable to all types of lifting equipment, this manual provides a comprehensive guide to the inspection and maintenance of lifting equipment. It covers the inspection of the crane's structure, hoist, trolley, and hook, as well as the inspection of the crane's electrical and hydraulic systems. The manual also includes a section on the inspection of the crane's safety devices, such as limit switches and overload protection.

Inspection

The inspection should be performed at regular intervals, as specified in the manufacturer's instructions, and should be documented in a logbook.
