system transformation The report serves as the official M E report for the Comprehensive Africa Agriculture Development Programme CAADP tracking progress on over 30 CAADP indicators The Digital Transformation of Labor Anthony Larsson, Robin Teigland, 2019-11-11 Through a series of studies the overarching aim of this book is to investigate if and how the digitalization digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market This book also seeks to illuminate what actors groups are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market in light of an accelerating digitalization digital transformation of society at large

Stan Metcalfe, Uwe Cantner, 2012-12-06 For as long as one can remember the edifice of the neoclassical economic synthesis has been under attack Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow Debreu theorems of welfare economics They have queried the excessive formalism of the edifice and the lack of practical significance of many of the results They have castigated the neoclassical synthesis for its internal incoherence lacking an independent theory of capital for example one of the favorite topics of the Cambridge school its lack of a dynamic element its non evolutionary character its lack of any conception of market process and so the list could be continued Blaug 1997 Through all this the neoclassical synthesis remains as strong as ever impervious it seems to these or any other attacks In this paper a different tack is taken The neoclassical edifice is left alone standing as a representation of what goes on in a certain kind of economy namely the economy where goods and services are produced and exchanged The paper then introduces another kind of economy namely an economy of productive entities called resources that are needed to produce the economy of goods and services **Out of Africa: Fashola-Reinventing Servant Leadership to Engender Nigeria's Transformation** John M.
