It covers three main categories based on the source of the data that can be unstructured text TextQA, structured knowledge graphs KBQA, and the combination of both. Developing a QA system usually requires using a combination of various important techniques including natural language processing, information retrieval and extraction, knowledge graph processing and machine learning. After a general introduction and an overview of the book in Chapter 1, the history of QA systems and the architecture of different QA approaches are explained in Chapter 2. It starts with early close domain QA systems and reviews different generations of QA up to state of the art hybrid models. Next Chapter 3 is devoted to explaining the datasets and the metrics used for evaluating TextQA and KBQA. Chapter 4 introduces the neural and deep learning models used in QA systems. This chapter includes the required knowledge of deep learning and neural text representation models for comprehending the QA models over text and QA models over knowledge base explained in Chapters 5 and 6 respectively. In some of the KBQA models the textual data is also used as another source besides the knowledge base; these hybrid models are studied in Chapter 7. In Chapter 8 a detailed explanation of some well known real applications of the QA systems is provided. Eventually open issues and future work on QA are discussed in Chapter 9. This
