

General

LIFT LINKAGE

This section has the description and repair procedures for the MPB040-E, MPW045-E, MPW050-E units. The lifting mechanism is operated by the hydraulic system. Hydraulic fluid extends the lift cylinder, operates the lift linkage, and raises the forks.

On all motorized lift trucks, when the lift button on the control handle is depressed, the hydraulic pump sends

high pressure hydraulic fluid to the lift cylinder. This action extends the cylinder, operates the lift linkage, and raises the forks. At the same time, the rocker arms and the rear links mounted under the drive unit platform are pulled upward. This causes the push rod assembly to be pushed toward the load wheel end of the truck. The movement of the push rods in this direction causes the load wheels to pivot down on their pivot pins. See Figure 1.
