written by an international team of more than 100 experts provide an important update on the physiological and pathological mechanisms of key areas of critical illness and the diagnostic and therapeutic approaches to these conditions for the pharmacist. There are chapters focusing on specific diseases or conditions including shock, acute liver failure, acute kidney injury, delirium, and acute pulmonary embolism; chapters on interpretation of diagnostic tests such as radiology and electrocardiography; chapters on therapeutic interventions including mechanical ventilation, intravenous fluids, renal replacement therapy, ECMO, nutrition, and blood transfusion; and chapters on specific groups of ICU patients including obstetric, oncology, transplant, and burn patients. Two of the chapters on the approach to clinical reasoning in critical care and sustainable pharmacy practice in the ICU are unique chapters to pharmacy education and training. Providing an up to date overview of topics related to critical care and emphasizing the importance of correct diagnosis in providing appropriate and optimal treatment, this collection will help prepare ICU pharmacists for their multifaceted responsibilities as members of the ICU team, including an expanded role in limiting misdiagnosis.
