information is expected to enhance the credibility of the contractors in the eyes of the clients and to some extent simplify the existing operations. Another important highlight is that it holistically covers the stages from the raw material to project completion to handover and beyond. This will help the oil and gas piping contractors to train their project management staff to follow the best practices in the oil and gas industry. Furthermore, this piping handbook provides an important indication of the important project-related factors: hard factors and organizational-related factors, soft factors to achieve the desired project performance dimensions such as timely completion, cost control, acceptable quality, safe execution, and financial performance. Lastly, the role of ISO management systems such as ISO 9001, ISO 14001, and OHSAS 18001 in construction projects is widely known across the industry; however, oil and gas specific ISO quality management systems such as ISO 29001 and project specific management systems such as ISO 21500 are not widely known in the industry, which are explained in detail in this handbook for the benefit of the oil and gas construction organizations.

Features: Covering the stages from the raw material to project completion to handover and beyond; Providing practical guidelines to oil and gas piping contractors for training purposes and best practices in the oil and gas industry; Emphasizing project-related factors: hard factors and organizational-related factors, soft factors with a view to achieve the desired project performance; Highlighting the roles of ISO management systems in oil and gas projects.

Handbook of Nondestructive Evaluation 4.0 Norbert Meyendorf, Nathan Ida, Ripudaman (Ripi) Singh, Johannes Vrana, 2025-06-29. This handbook now as second edition continues to comprehensively cover the cutting edge trends and techniques essential for the integration of nondestructive evaluation (NDE) into the changing face of the modern industrial landscape. In particular, it delves into the marriage of NDE with new techniques in e.g. data mining and management, cloud computing, autonomous operation, AI for data analysis and decision making, as well as cyber security, highlighting the potential for cyber-physical controlled production and discussing the myriad possible applications across many different industries. The

Handbook of NDE 4.0 centers around the Industry 4.0 philosophy the next generation of industrial production encompassing all aspects of networking across all industrial areas. It discusses the adaptation of existing NDE techniques to emerging new technological areas such as 3D printing via the introduction of cyber systems into the inspection and maintenance processes. In addition, the handbook covers topics such as the management and processing of big data with respect to real time monitoring of structural integrity and reliable inspection of individual components. Remote NDE to include competence not available on site will be a potential technique to increase reliability of NDE inspections by integrating additional specialist inputs into the decision process by methods such as telepresence thereby better leveraging the scarce resources of senior inspectors into industrial inspections at multiple sites. The handbook also includes non technical topics of direct relevance to leadership management and adoption of this new philosophy. The handbook houses a wealth of essential information to help academics, industry professionals, regulatory bodies and entrepreneurs navigate through this burgeoning new field. The material in this handbook is presented with the intention of ultimately improving human safety through reliable inspections and dependable maintenance of critical infrastructure while also enhancing business value through reduced downtime, affordable maintenance and talent optimization. The content is positioned to inspire NDE professionals to think broadly in terms of their role as continuous value add rather than discrete decision support. This second edition contains many new chapters and half of all chapters were revised from the 1st edition based on the engagement of authors through global platforms such as the ICDNT Specialist International Group on NDE 4.0 and the International conference series on NDE 4.0.
