rates because they don't have access to the same level of support as career firefighters. Healthcare workers especially those working in emergency rooms and intensive care units are also at higher risk. For example, nurses working in critical care units are more likely to develop PTSD than nurses in other groups. In addition, while senior level nurses report fewer PTSD symptoms than junior ones, they report higher rates of burnout. Finally, healthcare workers exposed to patients that have experienced violence such as an assault victim are more likely to develop PTSD than surgeons who treat assault victims. Rescue workers, medical workers, and volunteers who act as first responders during disasters witness the aftermath of horrific events and can even become involved in severe traumatic events. The prevalence of PTSD in these individuals has been estimated to be between 15 and 30 percent. Journalists who work as war correspondents are at higher risk of being injured, killed, or kidnapped. Their lifetime prevalence of PTSD, which can be as high as 30 percent, reflects their lack of access to support and PTSD treatment options. Transit and train operators are frequently exposed to physical threats and witness suicide incidents such as person under train events. Exposure to these traumatic and threatening circumstances can be a daily or weekly occurrence. Bus drivers are more prone to PTSD because they have more direct contact with the general public than train drivers locked in secure train cabs. In these high-risk professions, the incidence of trauma declines when policies are in place to debrief victims, give victims immediate access to counseling, and screen for individuals at high risk of having adverse reactions to traumatic conditions.

Bruce & Borg's Psychosocial Frames of Reference Terry Krupa, Bonnie Kirsh, 2024-06-01

Psychosocial health is a fundamental element of all human health and well-being. Psychological, emotional, and social factors interact to influence people's occupational lives, in turn influencing psychosocial health. Occupational therapists practicing in contemporary health and social sectors require the knowledge, attitudes, and skills to identify and address these psychosocial factors. The classic and renowned Bruce Borg's Psychosocial Frames of Reference: Theories, Models, and Approaches for Occupation-Based Practice, Fourth Edition, by Drs. Terry Krupa, Bonnie Kirsh, and their contributors examines psychosocial models of practice and their application across a wide range of practice areas in occupational therapy, instead of being singularly focused on practice areas of the needs of people living with identified mental illnesses. Efforts have been made to highlight the relevance of specific models to practice for people with mental illnesses, particularly where the issues experienced by this group have historically been poorly addressed. The authors have also organized models and practice approaches according to the level at which they intervene to create change: occupation, person, environment, and transdisciplinary levels. As their central domain of concern, the first group of occupational models or approaches have a focus on what people do in their daily lives. A second group of models reflect those that intervene at the level of the person. This group understands strengths and problems in occupation as evolving largely from features or qualities of the individual, and the therapeutic processes suggested are directed to changing or building upon these features. A third group of models and approaches focus on the psychosocial context and environment to elicit and enable a positive change in occupation. In some cases, these environmental models expand commonly held narrow definitions of clinical practice to encourage occupational therapists to engage in population-level practices. Finally, a small group of models of practice are labeled as transdisciplinary. Transdisciplinary models provide ways to develop conceptualizations of psychosocial practice issues, practice language, and approaches that are shared across disciplinary boundaries. New in the completely updated Fourth Edition: Contains models and practice approaches that are useful in enabling occupational therapists to address psychosocial concerns relevant to human occupation. Explores the psychological, emotional, and social experiences of humans carried out in context and their linkages to occupational engagement and well-being. Puts forward practice models that focus on person-level aspects of occupation in psychosocial practice. Examines transdisciplinary models and their relationship to psychosocial occupational therapy concepts and practices. Presents well-established models and frameworks that focus on population and contextual level factors relevant to psychosocial occupational therapy practice. Discusses occupational therapy intervention approaches flowing from these models, relevant tools and practices, and where available, the supporting evidence base. Included with the

text are online supplemental materials for faculty use in the classroom With its updated models and a wide range of practice areas Bruce Borg's Psychosocial Frames of Reference Theories Models and Approaches for Occupation Based Practice Fourth Edition is the perfect resource for the occupational therapist student faculty and clinician or any practitioner in psychosocial and mental health
