Teaching Chemistry Around the World Björn Risch, 2010 As teachers we often tend to expect other countries to teach chemistry in much the same way as we do but educational systems differ widely At Bielefeld University we started a project to analyse the approach to chemical education in different countries from all over the world Teaching Chemistry around the World 25 countries have participated in the project The resulting country studies are presented in this book This book may be seen as a contribution to make the structure of chemistry teaching in numerous countries more transparent and to facilitate communication between these countries Especially in the case of the school subject chemistry which is very unpopular on the one hand and occupies an exceptional position on the other hand due to its relevance to jobs and everyday life and most notably due to its importance for innovation capacity and problem solving we have to learn from each others educational systems

Studies in Science Education in the Asia-Pacific Region May Hung Cheng,Alister Jones,Cathy Buntting,2017-09-13

Consistent with international trends there is an active pursuit of more engaging science education in the Asia Pacific region. The aim of this book is to bring together some examples of research being undertaken at a range of levels from studies of curriculum and assessment tools to classroom case studies and investigations into models of teacher professional learning and development. While neither a comprehensive nor definitive representation of the work that is being carried out in the region, the contributions from China, Hong Kong, Taiwan, Korea, Japan, Singapore, Australia and New Zealand give a taste of some of the issues being explored and the hopes that researchers have of positively influencing the types of science education experienced by school students. The purpose of this book is therefore to share contextual information related to science education in the Asia Pacific region as well as offering insights for conducting studies in this region and outlining possible questions for further investigation. In addition, we anticipate that the specific resources and strategies introduced in this book will provide a useful reference for curriculum developers and science educators when they design school science curricula and science both pre-service and in-service teacher education programmes. The first section of the book examines features of science learners and learning and includes studies investigating the processes associated with science conceptual learning, scientific inquiry, model construction and students' attitudes towards science. The second section focuses on teachers and teaching. It discusses some more innovative teaching approaches adopted in the region, including the use of group work, inquiry-based instruction, developing scientific literacy and the use of questions and analogies. The third section reports on initiatives related to assessments and curriculum reform, including initiatives associated with school-based assessment, formative assessment strategies and teacher support accompanying curriculum reform. Simon,Christina Ottander,Ilka Parchmann,2015-08-20 This book explores the ways in which small-scale research studies arise from issues of practice and how they are conceptualised, theorised and implemented using a variety of methodological approaches and frameworks. The narratives written by thirteen doctoral students tell real stories of projects and challenges that researchers face when making the transition from educational practitioner to researcher. Considering case studies from the UK, Sweden and Germany, chapters seek to investigate and inform others about how doctoral students solved individual

and typical problems linking practice and research Each methodological journey highlights and illustrates the iterative and cyclic nature of research and the normality of the process of going back and forth between data and theory making changes of direction as research proceeds The book includes frameworks for combining research theory and practice drawing from the methodological decisions and conclusions each contributor made to develop their own practice oriented research Narratives of Doctoral Studies in Science Education will be key reading for researchers and academics in the fields of educational research science education research methods and higher education as well as masters and doctoral students undertaking their own research projects
