Axelson, 1999 **USB Complete** Jan Axelson, 2004 This guide takes the pain out of designing for this popular interface with specific detailed examples that show how to develop USB devices and the applications that communicate with them How the USB communicates with the PC deciding if a project should use a USB interface choosing a USB controller chip for peripheral design and determining code with Windows applications are covered in detail **So You Wanna Be an Embedded Engineer** Lewin Edwards, 2006-08 In this new highly practical guide expert embedded designer and manager Lewin Edwards answers the question How do I become an embedded engineer Embedded professionals agree that there is a treacherous gap between graduating from school and becoming an effective engineer in the workplace and that there are few resources available for newbies to turn to when in need of advice and direction This book provides that much needed guidance for engineers fresh out of school and for the thousands of experienced engineers now migrating into the popular embedded arena This book helps new embedded engineers to get ahead quickly by preparing them for the technical and professional challenges they will face Detailed instructions on how to achieve successful designs using a broad spectrum of different microcontrollers and scripting languages are provided The author shares insights from a lifetime of experience spent in the trenches covering everything from small vs large companies and consultancy work vs salaried positions to which types of training will prove to be the most lucrative investments This book provides an expert s authoritative answers to questions that pop up constantly on Usenet newsgroups and in break rooms all over the world An approachable friendly introduction to working in the world of embedded design Full of design examples using the most common languages and hardware that new embedded engineers will be likely to use every day Answers important basic questions on which are the best products to learn trainings to get and kinds of companies to work for **Embedded Linux** Craig Hollabaugh, 2002 A guide to using Linux on embedded platforms for interfacing to the real world Embedded Linux is one of the first books available that teaches readers development and implementation of interfacing applications on an Embedded Linux platform *Automated Biometrics* David Zhang, 2000-05-31 Biometrics based authentication and identification are emerging as the most reliable method to authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature palmprint iris hand voice and face that can be used to authenticate

a person's identity or establish an identity from a database With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently there are over ten different biometrics systems that are either widely used or under development Some automated biometrics such as fingerprint identification and speaker verification have received considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications However very few books are exclusively devoted to such issues of automated biometrics **Automated Biometrics Technologies and Systems** systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security

microcontroller or other CPU and write device firmware to access the media and perform USB communications Comparisons of popular storage media options to help users choose a media type for a project are included and the types described cover hard drives and flash memory cards such as the MultiMediaCard MMC Secure Digital SD card and CompactFlash card Helpful tips on developing an embedded host that can access USB mass storage devices are also covered Communicating Process Architectures 2004 Ian East,J. Martin,P.H. Welch,2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline People and Computers XV — Interaction without Frontiers Ann Blandford,Jean Vanderdonckt,Phil Gray,2011-06-27 In 2001 AFIHM and the British HCI Group combined their annual conferences bringing together the best features of each organisation s separate conference series and providing a special opportunity for the French and English speaking HCI communities to interact This volume contains the full papers presented at IHM HCI 2001 the 15th annual conference of the British HCI group a specialist group of the British Computer Society and the 14th annual conference of the Association Francophone d interaction Homme Machine an independent association for any French speaking person who is interested in Human Computer Interaction Human Computer Interaction is a discipline well suited to such a multi linguistic and multi cultural conference since it brings together researchers and practitioners from a variety of disciplines with very different ways of thinking and working As a community we are already used to tackling the challenges of working across such boundaries dealing with the problems and taking advantage of the richness of the resulting insights interaction without frontiers The papers presented in this volume cover all the main areas of HCI research but also focus on considering the challenges of new applications addressing the following themes Enriching HCI by crossing national linguistic and cultural boundaries Achieving greater co operation between disciplines to deliver usable useful and exciting design solutions
