SMARTSTART™

Quick Reference Install Guide

VSM200/250, DSM200/250

Installation Procedure

This product is compatible with most Directed Electronics Security, Remote Start and hybrid systems that are ESP2 compatible (3 or 4-pin). Non-compatible systems include 3001L and older AM1/AM5 models.

Please read the following before proceeding

1. Customer Information required:
 - Record the customer information requested in step 4a of this procedure. The module ID # is provided on a sticker which can be affixed to the space provided in step 4a. This information is required for final verification/activation of the VSM200/250 or DSM200/250.
2. Installation Points:
 - Install and test the security/remote start system first using the associated guides and wiring diagram. If using an existing system, verify it is fully functional before installing the Directed SmartStart module.
 - For 3000-series or standalone SmartStart systems with no remote control, test the installed system via the SmartStart activation portal.
 - Mount the SmartStart module as high as possible in the vehicle (the engraved side faces up for GPS devices). Mount with minimal

obstructions that can affect communications and within reach of the main Directed system using the provided cables (do not extend).

The module's signal strength (RSSI) can be viewed in the activation portal after a successful transmission test.

-50 to -90 dB = good signal strength
-91 to -100 dB = borderline/inconsistent signal strength
> -100 dB = weak, insufficient signal strength

- DO NOT connect the SmartStart module until the final programming of the Remote Start main unit and verification of security/remote start system operations are completed.

CAUTIONS

The white plug is **ONLY** for RSR (Remote Start Ready) and RXT applications using certain Xpresskit interfaces (go to www.xpresskit.com for details on supported devices & vehicles).

For systems with combined 4-pin ESP/D2D ports, you **CANNOT** use an interface module in D2D mode when using a SmartStart module. You must use W2W on the bypass module.

DO NOT connect the black 3-pin ESP connector to white Door Lock port on Directed systems.

There should **NEVER** be more than one data plug connected from the 3-way harness.

Wiring Schematic

Note: The analog output wires are only active if the device has been configured for Analog Wire mode in the installation portal.

NOTE: The appearance and connector/port arrangement on the Directed/Avital/Xpresskit system may differ to the examples shown.
