The causes and effects of smoking among students

Smoking is one of the most dangerous widespread phenomena that threaten lives of a huge number of people worldwide. It starts as a way of having fun, but ends as an addiction that is therefore so difficult to give up. Today, we often hear of “smoking among students”. So why do students smoke and what are the effects that smoking has on them?

There are many reasons behind the phenomenon of smoking among students. To start with, students smoke because they are curious and want to discover the world of those who smoke. They are just trying to have some fun when they smoke the first cigarette. Other students take up smoking due to the family problems, especially when they see their parents having quarrels. Moreover, some students smoke since they think a cigarette would relieve stress they had during the day, especially at school. Last but not least, students try to imitate adult smokers because they want to show that they are adults, too.

If we look at the consequences of smoking, we will find so many. Smoking causes cancer. As a result, the addict students would suffer from health problems that end in death. Another effect is that after certain years, the addict would develop respiratory problems and will face a lot of problems in running without losing breath. So, asthma, bronchitis, and emphysema are always a lingering threat. One more important effect of smoking is that it causes a lot of anger for the addict. Whenever they lack cigarettes, they start reacting angrily and strangely.

To sum up, smoking is an ongoing threatening danger for addicts and might affect the next generation. The best solution is prevention according to the proverb that says “Prevention is better than cure”.

Smoking and Health Bulletin, 1976 **How Tobacco Smoke Causes Disease** United States. Public Health Service. Office of the Surgeon General, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies Mechanisms of disease are important because they may provide plausibility which is one of the guideline criteria for assessing evidence on causation This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke This evidence is relevant to understanding how smoking causes disease to identifying those who may be particularly susceptible and to assessing the potential risks of tobacco products **The Effect** Nick Huntington-Klein, 2025-07-09 The Effect An Introduction to Research Design and Causality Second edition is an excellent teaching text about research design specifically concerning research that uses observational data to make a causal inference It is separated into two halves each with different approaches to that subject The first half goes through the concepts of causality with very little in the way of estimation It introduces the concept of identification thoroughly and clearly and discusses it as a process of trying to isolate variation that has a causal interpretation Subjects include heavy emphasis on data generating processes and causal diagrams Concepts are demonstrated with a heavy emphasis on graphical intuition and the question of what we do to data When we add a control variable what does that actually do The target audience is practitioners as well as undergraduate and graduate students studying causal inference in various fields such as statistics econometrics biostatistics the social sciences and data science Key Features Extensive code examples in R Stata and Python Chapters on heterogeneous treatment effects simulation and power analysis new cutting edge methods and uncomfortable ignored assumptions An easy to read conversational tone Up to date coverage of methods with fast moving literatures like difference in differences The second edition features a new chapter on partial identification updated materials methods and writing throughout and additional materials for help navigating the book or in using the book in teaching A Student Guide to College Composition William Murdick, 2011-07 This book helps students succeed in composition by showing them How to be effective students How to handle the most difficult challenges of academic writing How to approach the most common writing assignments How to pass a timed writing test William Murdick has a Ph D in rhetoric and is the author of three other writing textbooks The Portable Business Writer Houghton Mifflin 1999 and The Portable Technical Writer Houghton Mifflin 2001 and College Writing A First Course Writing and Reasoning Jain 2006 Note on the Second Edition This expanded Second Edition includes full chapter treatments of the

Cigarette Smoke Toxicity David Bernhard, 2011-02-16 Smoking causes and contributes to a large number of human diseases yet due to the large number of potentially hazardous compounds in cigarette smoke almost 5 000 chemicals have been identified establishing the link between smoking and disease has often proved difficult This unbiased and scientifically accurate overview of current knowledge begins with an overview of the chemical constituents in cigarette smoke their fate in the human body and their documented toxic effects on various cells and tissues Recent results detailing the many ways components of cigarette smoke adversely affect human health are also presented highlighting the role of smoking in cardiovascular respiratory infectious and other diseases A final chapter discusses current strategies for the treatment and prevention of smoking induced illness Despite the obvious importance of the topic this is the first comprehensive reference on tobacco smoke toxicity making for essential reading for all toxicologists and healthcare professionals dealing with smoking related diseases *Causation, Prediction, and Search* Peter Spirtes, Clark Glymour, Richard Scheines, 2001-01-29 The authors address the assumptions and methods that allow us to turn observations into causal knowledge and use even incomplete causal knowledge in planning and prediction to influence and control our environment What assumptions and methods allow us to turn observations into causal knowledge and how can even incomplete causal knowledge be used in planning and prediction to influence and control our environment In this book Peter Spirtes Clark Glymour and Richard Scheines address these questions using the formalism of Bayes networks with results that have been applied in diverse areas of research in the social behavioral and physical sciences The authors show that although experimental and observational study designs may not always permit the same inferences they are subject to uniform principles They axiomatize the connection between causal structure and probabilistic independence explore several varieties of causal indistinguishability formulate a theory of manipulation and develop asymptotically reliable procedures for searching over equivalence classes of

causal models including models of categorical data and structural equation models with and without latent variables The authors show that the relationship between causality and probability can also help to clarify such diverse topics in statistics as the comparative power of experimentation versus observation Simpson's paradox errors in regression models retrospective versus prospective sampling and variable selection The second edition contains a new introduction and an extensive survey of advances and applications that have appeared since the first edition was published in 1993 **Minutes of Proceedings Before the Committee for Privileges; Report from Committee of Selection of H.L.; and Reports from Select Committees of H.L., and Evidence** ,1906 **R. Kabat,2008-07-03 The media constantly bombard us with news of health hazards lurking in our everyday lives but many of these hazards turn out to have been greatly overblown According to author and epidemiologist Geoffrey C Kabat this hyping of low level environmental hazards leads to needless anxiety and confusion on the part of the public concerning which exposures have important effects on health and which are likely to have minimal or no effect Kabat approaches health scares as social facts and shows that a variety of factors can contribute to the inflating of a hazard These include skewed reporting by the media but also surprisingly the actions of researchers who may emphasize certain findings while ignoring others regulatory and health agencies eager to show their responsiveness to the health concerns of the public and politicians and

advocates with a stake in a particular outcome By means of four case studies Kabat demonstrates how a powerful confluence of interests can lead to overstating or distorting the scientific evidence He considers the health risks of pollutants such as DDT as a cause of breast cancer electromagnetic fields from power lines radon within residences and secondhand tobacco smoke Tracing the trajectory of each of these hazards from its initial emergence to the present Kabat shows how publication of more rigorous studies and critical assessments ultimately help put hazards in perspective
