Infrastructure Investments Fabian Regele, 2017-11-16. Fabian Regele examines the appropriateness of the current regulatory treatment and the general suitability of unlisted infrastructure equity investments for the investment purposes of insurance companies. The employed valuation model of a stylized infrastructure asset delivers sound economic results and is consistent with the typical J-curve effect of the cumulative cash flows of these assets. In the context of a portfolio optimization, the infrastructure asset improves the insurance company's solvency situation by lowering its default probability and increasing its solvency ratio. In regard to the asset's risk contribution, there is a time-variant occurrence of certain risk channels during its lifecycle that leads to substantial differences in the risk exposure of the insurance company.

History Education and Historical Inquiry Bob Bain, Arthur Chapman, Alison Kitson, Tamara Shreiner, 2024-04-01. Inquiry plays a vital role in history as a discipline which constructs knowledge about the past, and it is a vital organizing principle in history education in many countries around the world. Inquiry is also much debated, however, and although it has prominent contemporary advocates around the world, it also has prominent critics in education studies. What forms does classroom-based historical inquiry take, and to what extent is it understood in differing ways in different contexts? What do we know about the affordances and constraints associated with inquiry-based learning in history? What is

the evidence of the effectiveness or ineffectiveness of inquiry based historical learning We address these questions in the volume by presenting seventeen papers from eight different international contexts exploring historical inquiry that will be of interest both to history teachers curriculum designers and history education researchers seven papers from England three from the US two from Sweden and one each from Argentina Australia Belgium Canada and Singapore The volume adds to our knowledge about teachers thinking about inquiry and teachers inquiry practices It adds to our knowledge about the impact and value of inquiry in developing children s historical learning It also explores the challenges that implementing inquiry can present for history teachers and provides support for implementation and examples of successful practice

Energy and Climate Change Committee, 2013 Failure to build a new fleet of nuclear power stations in the UK could make it much more expensive to meet our climate change targets and Ministers must urgently develop a back up energy strategy The nuclear industry has outlined plans that would deliver 16GW new nuclear power stations by 2025 Although the Government and industry have learnt some important lessons from this process there are still a number of obstacles which could delay new build projects in the UK The Committee supports the Government's use of Contracts for Difference CfDs to help make new nuclear power stations easier to finance but are concerned at the lack of transparency around the price negotiations The new contracts must provide value for money for consumers and should not be offered at a price that is higher than other low carbon sources of energy such as offshore wind which is hoped to be around 100 MWh by 2020 Public attitudes have an important role to play in projects to build new nuclear power stations The Committee is concerned that local communities might not be able to take part in planning consultations on an equal footing with the project developers The report recommends that the Government should consider providing more support to local community groups so that they can engage better with the planning process The Government has plans to allow local authorities hosting renewable energy projects to retain business rates The report argues that this scheme should be extended to new nuclear projects too Department of the Interior and Related Agencies Appropriations for 2003 United States.
