understanding of its underlying physiology an awareness of its natural history an appreciation of the impact on the patient and a comprehensive approach to minimising that impact which is both multi disciplinary and consistent over time

Regrettably these essential requirements are rarely met and consequently inadequately managed spasticity results in a range of painful and disabling sequelae which with the right approach are for the most part preventable Although there are several excellent publications looking at this area none are a truly practical guide relevant to all members of the multi disciplinary team involved in spasticity management Anyone who has been involved in setting up a new service knows how difficult and how protracted a process this can be and if it has been done before why reinvent it The basis of this manual is to collect together the experience and knowledge of such a team who have worked in this area for 10 years now It pulls together all areas including how to set up and develop a service as well as useful management strategies On a practical note it includes complete copies of all of our patient information assessment proformas protocols for different interventions nursing care plans and an integrated care pathway for outpatient spasticity management both as hard copy but also on CD ROM to aid in reproduction These protocols are of course specific to our team but could easily be adapted for use in other centres We are not saying this is the right or only way to run a spasticity service and there is certainly room for improvement but we hope by sharing our experience we can help others to develop their own service thus improving management for all individuals with spasticity
