Pseudokarst Terraines Richard C. Benson, Lynn B. Yuhr, 2015-09-24 This book provides a practical strategy for obtaining a more complete and accurate geologic site characterization. The strategy and methods to characterize complex geologic settings are readily available. The strategy utilizes readily available technology, basic science, and good old fashioned common sense, resulting in a solid understanding of geologic and even karst or pseudokarst conditions. We provide an introduction to many off the shelf methods available for site characterization as well as examples of their application throughout the book. The purpose of a geologic site characterization is to understand the 3 dimensional geologic framework along with the engineering and hydrologic properties of a site including any man made impacts. A well done site characterization is the cornerstone of all geotechnical groundwater and environmental projects. The geologic conditions, particularly karst conditions, can significantly impact a site including its structural stability, groundwater pathways, and potential for rapid transport or traps for contaminants. Once we have adequately characterized the geologic conditions, we can carry out our remediation design and construction, model flow, and make risk assessments that are accurate and reliable. **Electrical Engineer**, 1895

Drying and Wetting of Building Materials and Components J.M.P.Q. Delgado, 2014-06-19 This book, *Drying and Wetting of Building Materials and Components*, provides a collection of recent contributions in the field of drying and wetting in porous building materials. The main benefit of the book is that it discusses some of the most important topics related to the drying and wetting processes, namely innovations and trends in drying science and technology, drying mechanism and theory, equipment, advanced modelling, complex simulation, and experimentation. At the same time, these topics will be going to the encounter of a variety of scientific and engineering disciplines. The book is divided in several chapters that intend to be a resume of the current state of knowledge for benefit of professional colleagues. **Structural Connections for**

Lightweight Metallic Structures Pedro M.G.P. Moreira, Lucas F. M. da Silva, Paulo M.S.T. de Castro, 2012-02-03 Increasing concern with fuel consumption leads to widespread interest in lightweight structures for transportation vehicles. Several competing technologies are available for the structural connections of these structures, namely welding, mechanical fastening, riveting, and adhesive technologies. Arranged in a single volume, this work presents state-of-the-art discussions of those aspects and processes, presenting greater novelty whilst simultaneously keeping wide applicability potential and interest. The topics chosen have the common feature of being currently applied in lightweight structures, and one of the characteristics of this work is bringing together relevant state-of-the-art information usually presented in separate publications specializing in a single technology. The book provides discussions and examples of concrete applications so that it appeals to researchers and designers and engineers involved in the design and fabrication of lightweight structures.
