The Patient Will See You Now Eric Topol, 2016-10-25 The essential guide by one of America's leading doctors to how digital technology enables all of us to take charge of our health A trip to the doctor is almost a guarantee of misery You'll make an appointment months in advance You'll probably wait for several hours until you hear the doctor will see you now but only for fifteen minutes Then you'll wait even longer for lab tests the results of which you'll likely never see unless they indicate further and more invasive tests most of which will probably prove unnecessary much like physicals themselves And your bill will be astronomical In *The Patient Will See You Now* Eric Topol one of the nation's top physicians shows why medicine does not have to be that way Instead you could use your smartphone to get rapid test results from one drop of blood monitor your vital signs both day and night and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor all at a small fraction of the cost imposed by our modern healthcare system The change is powered by what Topol calls medicine's Gutenberg moment Much as the printing press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare With smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which doctor knows best Medicine has been digitized Topol argues now it will be democratized Computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable Massive open online medicine where diagnostics are done by Facebook like comparisons of medical profiles will enable real time real world research on massive populations There's no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy Nevertheless the result better cheaper and more human health care will be worth it Provocative and engrossing *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care That is for all of us *Blended Learning: Aligning Theory with Practices* Simon K.S. Measuring Service Performance Dr Ralf Lisch,2014-03-28 In service societies the tertiary sector has long become the primary sector in terms of GDP and employment Quality research and testing means better service and success in the service industries demands quality Nonetheless complaints about insufficient inconsistent or bad service abound Quality decides on success and failure Where so much is at stake management decisions call for systematic research and consumers look for relevant results that provide guidance in complex markets Research into quality and customer satisfaction gets to the core of a business However many so called studies hardly meet essential criteria of empirical research and deliver artefacts rather than facts This book puts an end to common misconceptions of quality studies Measuring Service Performance is an appeal for an approach to quality research that meets quality criteria itself It is a compelling argument against widespread but rather dubious dealings with measurement data and statistics Ralf Lisch calls for a reconsideration of the research process focussing on content instead of method and adding meaning to results Because service excellence deserves research excellence Written in a practical accessible style the book offers practitioners as well as market researchers MBA students and others involved in the service sector a critical analysis and discussion of the essentials of Practical Research for Better Quality

Methods and Concepts for Designing and Validating Smart Grid Systems Thomas I. Strasser,Sebastian Rohjans,Graeme M. Burt,2019-11-20 Energy efficiency and low carbon technologies are key contributors to curtailing the emission of greenhouse gases that continue to cause global warming The efforts to reduce greenhouse gas emissions also strongly affect electrical power systems Renewable sources storage systems and flexible loads provide new system controls but power system operators and utilities have to deal with their fluctuating nature limited storage capabilities and typically higher infrastructure complexity with a growing number of heterogeneous components In addition to the technological

change of new components the liberalization of energy markets and new regulatory rules bring contextual change that necessitates the restructuring of the design and operation of future energy systems Sophisticated component design methods intelligent information and communication architectures automation and control concepts new and advanced markets as well as proper standards are necessary in order to manage the higher complexity of such intelligent power systems that form smart grids Due to the considerably higher complexity of such cyber physical energy systems constituting the power system automation protection information and communication technology ICT and system services it is expected that the design and validation of smart grid configurations will play a major role in future technology and system developments However an integrated approach for the design and evaluation of smart grid configurations incorporating these diverse constituent parts remains elusive The currently available validation approaches focus mainly on component oriented methods In order to guarantee a sustainable affordable and secure supply of electricity through the transition to a future smart grid with considerably higher complexity and innovation new design validation and testing methods appropriate for cyber physical systems are required Therefore this book summarizes recent research results and developments related to the design and validation of smart grid systems
