Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle including identity resource provisioning for people users and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions. This IBM Redbooks publication provides an approach for designing an identity management solution with IBM Tivoli Identity Manager Version 5.1. Starting from the high level organizational viewpoint we show how to define user registration and maintenance processes using the self registration and self care interfaces as well as the delegated administration capabilities. Using the integrated workflow we automate the submission approval processes for identity management requests and with the automated user provisioning we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure. **IBM Tivoli Storage Productivity Center V5.2 Release Guide** Karen Orlando, Paolo D'Angelo, Brian De

Performance Tuning for IBM Security Directory Server Annemarie Fitterer,Dave Bachmann,David Butler,Ben Matteson,Ramamohan T. Reddy,Sujay Shinde,Rick Smith,IBM Redbooks,2014-04-02 In today s highly connected world directory servers are the IT cornerstone of many businesses These components of the corporate infrastructure are the foundation of authentication systems for internal and more commonly external user populations Managing a directory server with several hundred internal users is not all that difficult However managing a directory server with several million external users in all 24 time zones throughout the world is a much more daunting task IBM Security Directory Server software can handle millions of entries given the right architecture configuration and performance tuning However that tuning can differ greatly from tuning for a smaller server with only a few hundred thousand entries Managing and tuning a directory server of this size requires a change in mindset Tuning and performance must be a focus even before the hardware is ordered A proactive approach must be taken after installation also including the pretuning steps to better interface with other products to make installations and migrations successful and then regular maintenance to keep the directory running smoothly This IBM Redbooks publication is the accumulation of lessons learned in many different real world environments including a 24 server fault tolerant configuration with more than 300 million entries The authors pooled their knowledge and resources to provide the most comprehensive performance view possible from hardware to software sort heaps to buffer pools and table cardinalities In large directory server deployments use this document as a guide for how to get the right fit for your environment
