Taproot Investigation Guide:

Guidelines for Investigating Chemical Process Incidents American Institute of Chemical Engineers. Center for Chemical Process Safety, 1992 Newest techniques for complex investigations based on actual plant and industry data These Guidelines establish a basis for successful feedback through investigation of process incidents to determine the many causes and to implement changes which will prevent recurrence It provides a clear definition of the role of incident investigation in overall process safety management as well as guidelines concepts and options Detailed investigation techniques and how to establish such a system are set out for plant staff technical professionals or middle level managers Primary focus is on incidents with catastrophic potential but the concepts should also be used for investigating environmental incidents minor injuries less significant property damage events or near misses Also provides an overview of incident investigation principles as implemented by other industries worldwide The annotated bibliography included makes this practical handbook an invaluable reference source

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field

Incident Investigation and Accident Prevention in the Process and Allied Industries Nigel Hyatt, 2018-10-08 To prevent future accidents a complete examination of the causes and contributory factors of an accident is necessary Stressing the need to correct these issues Incident Investigation and Accident Prevention in the Process and Allied Industries strikes a balance between the theoretical and applied aspects of accident investigation while also addressing accident prevention Based on the authors forty years of experience this detailed work covers an extensive range of topics often encountered during an incident investigation Since the scope and needs of investigations can widely vary the author begins with an introduction that provides guidance on how to use the book He supplies a roadmap of incident investigation making the material accessible to novices yet also valuable to more seasoned investigators Topics include Responding to occurrence of incidents and emergency response Securing the site and handling eyewitness testimonies Notification of appropriate authorities compliance requirements and legal and insurance issues Internal external incident investigation options and investigation team requirements Disassembly gathering screening tagging storing of evidence and post incident testing Establishing preliminary causal mechanisms and root cause determinations Multiple cause determination incident modeling and human error evaluation and reporting Remedial and preventative measures lessons learned and reconstruction and retraining Accident prevention through predictive methodologies including pro active measures Pre and post incident management Corporate structuring attitudinal problems and planning an accident prevention program

Handbook of Loss Prevention Engineering Joel M. Haight, 2013-03-19 Loss prevention engineering describes all activities intended to help organizations in any industry to prevent loss whether it be through injury fire explosion toxic release natural disaster terrorism or other security threats Compared to process safety which only focusses on preventing loss in the process industry this is a much broader field Here is the only one stop source for loss prevention principles policies practices programs and methodology presented from an engineering vantage point As such this handbook discusses the engineering needs for manufacturing construction mining defense health care transportation and quantification covering the topics to a depth that allows for their functional use while providing additional references should more information be required The reference nature of the book allows any engineers or other professionals in charge of safety concerns to find the information needed to complete their analysis project process or design TapRoot Incident Investigation System Manual Mark Paradies, Linda Unger, System Improvements, Inc, 1996 *Guidelines for*
