

GENERAL

The vehicle is equipped with a jiffy stand (or jiffy stands) that locks when placed in the full forward position (along with the full weight of the vehicle resting on it).

100

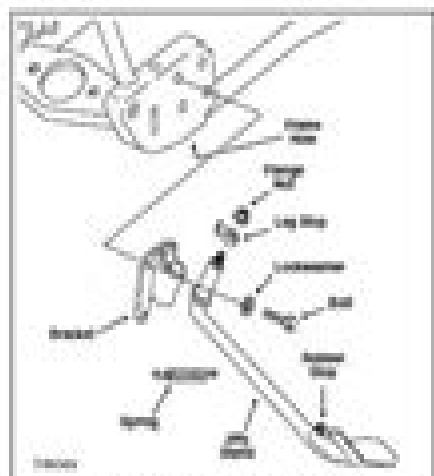

Without the full weight of the motorcycle resting on the jiffy stand, any vehicle movement can cause the jiffy stand to retract slightly from the full forward position. If the jiffy stand is not in the full forward or lock position when the full vehicle weight is rested on it, the vehicle could fall over, which could result in death or serious injury.

100

Always park the vehicle on a firm, level surface. The weight of the vehicle can cause it to fall over, which could result in death or serious injury.

100

The sure jiffy stand is fully retracted before riding. If jiffy stand is not fully retracted during vehicle operation, unexpected contact with the road surface can distract the rider. While the jiffy stand will retract upon contact, the momentary disturbance under rider distraction can lead to loss of vehicle control resulting in death or serious injury.

REMOVED

Securely block vehicle under frame to be sure that vehicle will not fall when jacking stand is removed. Inadequate safety precautions could result in death or serious injury.

1. Shift motorcycle under frame, so that vehicle is securely upright and level. Jiffy stand should be able to move through its full range of travel without the weight of the vehicle resting on it.
2. See Figure 2-171. Move jiffy stand to the retracted position (up). Release trigger nut and leg away from threaded end of jiffy stand leg.
3. Move jiffy stand to the full forward position (down). Grasping end of spring-assisted frame tube as possible, hold end and turn and shift rearward rear plate to unlock from frame bar. Release jiffy stand from bracket.
