TSR2 Andrew Brookes, 2017-10-19 The TSR2 is one of the greatest what if aircraft of the Cold War whose cancellation still generates anger and controversy among aviation fans It was a magnificent cutting edge aircraft one of the most striking of the Cold War but fell victim to cost overruns overambitious requirements and politics Its scrapping marked the point when Britain's aerospace industry could no longer build world class aircraft independently After the demise of TSR2 the RAF's future jets would be modified US aircraft like the Phantom and pan European collaborations like Tornado and Typhoon In this book the eminent air power analyst and ex Vulcan bomber pilot Andrew Brookes takes a fresh hard headed look at the TSR2 project telling the story of its development short career and cancellation and evaluating how it would have performed in Cold War strike roles as well as in the recent wars in the Middle East

Minerva Meets Vulcan: Scientific and Technological Literature - 1450-1750 Wolfgang Lefèvre, 2021-06-16 This book offers a comprehensive study and account of the co evolution of technological and scientific literature in the early modern period 1450 1750 It examines the various relationships of these literatures in six areas of knowledge Architecture Chemistry Gunnery Mechanical Engineering Mining and Practical Mathematics which represent the main types of advanced technological and scientific knowledge of the era These six fields of technologically advanced knowledge and their interrelations and interactions with learned knowledge are investigated and discussed through a specific lens by focusing on the technological literature Among present day historians of science it hardly remains controversial that contact and exchange between educated and practical knowledge played a significant role in the development of the natural sciences and technology in early modern Europe Several paths for such exchange arose from the late Middle Ages onward due to the formation of an economy of knowledge that fostered contacts and exchange between the two worlds How can this development be adequately described and how on the basis of such a description can the significance of this process for the early modern history of knowledge in the West be assessed These are the overarching questions this book tries to answer There exists a considerable amount of literature concerning several stations and events in the course of this long development process as well as its various aspects As meritorious and indispensable as many of these studies are none of them tried to portray this process as a whole with its most essential branches What is more many of them implicitly or explicitly took physics as a model of science and thus highlighted mechanics and mechanical engineering as the model of all interrelations of practical and learned knowledge By contrast this book aims at a more complete portrait of the early modern interrelations and interactions between learned and practical knowledge It tries to convey a new idea of the variety and disunity of these relations by discussing and comparing altogether six widely different fields of knowledge and practice The targeted audience of this book is first of all the historians of science and technology As one of the peer reviewers suggested the book could very well become a textbook used for teaching the history of science and technology at universities Furthermore since the book addresses fundamental aspects of the

significance emergence and development of modern science has for the self image of the West it can be expected that it will attract the attention and interest of a wider readership than professional historians **Monthly Catalogue, United States Public Documents** ,1989 **Catalog of Copyright Entries.
