**Cross-Lingual Word Embeddings** Anders Søgaard, Ivan Vulić, Sebastian Ruder, Manaal Faruqui, 2022-05-31 The majority of natural language processing NLP is English language processing and while there is good language technology support for standard varieties of English support for Albanian

Burmese or Cebuano and most other languages remains limited. Being able to bridge this digital divide is important for scientific and democratic reasons but also represents an enormous growth potential. A key challenge for this to happen is learning to align basic meaning bearing units of different languages. In this book the authors survey and discuss recent and historical work on supervised and unsupervised learning of such alignments. Specifically the book focuses on so called cross lingual word embeddings. The survey is intended to be systematic using consistent notation and putting the available methods on comparable form making it easy to compare wildly different approaches. In so doing the authors establish previously unreported relations between these methods and are able to present a fast growing literature in a very compact way. Furthermore the authors discuss how best to evaluate cross lingual word embedding methods and survey the resources available for students and researchers interested in this topic.

Malau, 2016-10-24 This book is a comprehensive grammatical description of the Vur s language spoken on the island of Vanua Lava in the Banks group of islands northern Vanuatu. Vur s is a previously undescribed language with very few minor published works referring to the language.

*Corporate Social Responsibility and Discrimination* Christina

Keinert-Kisin, 2016-04-27 This book presents and deconstructs the existing explanations for the differential career development of qualified men and women. It reframes the problem of discrimination in the workplace as a matter of organizational ethics, social responsibility and compliance with existing equal opportunity laws. Sensitive points are identified where social biases, decision makers' individual economic interests and shortcomings of organizational incentive policies may lead to discrimination against qualified women. The ideas put forward are empirically tested in an original laboratory experiment that examines personnel selection in the male dominated field of science and technology. It contrasts the selection of applicants with gendered and gender blind applications available to subjects under controlled conditions. 30% of participants were high level decision makers which is unprecedented in this field of research. The results highly relevant for organizational practice are explained and discussed in detail.
