Concurrent planning of railway maintenance windows and train services Tomas Lidén, 2018-11-05 Efficiency in public and freight transportation systems is of great importance for a society Railways can offer high capacity and relatively low environmental impact but require that several technical systems are tuned and operate well Specifically there is a tight interdependency between infrastructure and trains The consequences are that all subsystems

must be maintained and that the coordination of infrastructure activities and train operations is essential. Railway infrastructure maintenance and train services should ideally be planned together but practice and research about railway scheduling has historically focused mainly on train operations and timetabling while maintenance planning has received less attention and little research have considered the joint scheduling of both types of activities. Instead the traditional approach has been a sequential and iterative planning procedure where train timetabling often has precedence over infrastructure maintenance. This thesis studies how maintenance windows which are regular time windows reserved for maintenance work can be dimensioned and jointly scheduled with train services in a balanced and efficient way for both maintenance contractors and train operators. Mathematical methods are used with the aim of advancing the knowledge about quantitative methods for solving such coordination problems. The thesis contributes with new optimization models that jointly schedule maintenance windows and train services, investigates the solving efficiency of these models and studies crucial extensions of the planning problem primarily for the consideration of maintenance resources. Furthermore the models are applied to, verified and validated on a demanding real life problem instance. The main results are that integrated and optimal scheduling of maintenance windows and train services is viable for problems of practical size and importance and that substantial maintenance cost savings can be achieved with such an integrated approach as compared to a traditional sequential planning process. The thesis consists of an introduction and overview of the research followed by six papers which present:

1. A cost benefit model for assessment of competing capacity requests at a single location
2. An optimization model for integrated scheduling of both maintenance windows and train services
3. Mathematical reformulations that strengthen the optimization model
4. Extensions for handling resource considerations and cyclic schedules
5. A case study for a major single track line in Sweden
6. A mathematical study of length restricted sequences under cyclic conditions

Business, Civil Society and the 'New' Politics of Corporate Tax Justice Richard Eccleston, Ainsley Elbra, 2018-11-30. Since the financial crisis the extent of corporate tax avoidance has attracted media headlines and the attention of political leaders the world over. This study examines the new politics of corporate taxation and the role of civil society organisations in shaping the international tax agenda and influencing the tax practices of the world's largest and most powerful corporations. It highlights the complex and multi-dimensional strategies used by activists to influence public opinion, formal regulation and corporate behaviour in relation to international taxation.

Virtues and Fallacies of VAT: An Evaluation after 50 Years Robert F. van Brederode, 2021-08-09. Value added tax (VAT) is a mainstay of revenue systems in more than 160 countries. Because consumption is a more stable revenue base than other tax bases, VAT is less distorting and hence more likely to encourage investment, savings, optimum labor supply decisions and growth. VAT is not without criticism, however, and faces its own specific technical and policy challenges. This book, the first to thoroughly evaluate VAT from a global policy perspective after over 50 years of experience with its intricacies, offers authoritative perspectives on VAT's full spectrum from its signal

successes to the subtle ways its application can undermine revenue performance and economic neutrality The contributors leading tax practitioners and academics examine the key policy issues and topics that are crucially relevant for measuring the success of the tax in the first part of the book including revenue generation and revenue efficiency single rate versus multiple rates susceptibility to fraud exemptions and exceptions compliance cost for businesses policy and compliance gaps in revenue collection adjustment rules caused by the transactional nature of the tax transfer pricing issues treatment of vouchers permanent establishments and holding companies payment of refunds cross border digital transactions and supplies for free or below cost price The second part offers six country reports on New Zealand Japan China Colombia Ethiopia and India to demonstrate the different ways in which VAT operates in a variety of national economies Whether a government is contemplating the imposition of a general consumption tax for the first time or new rules for applying an existing one it is important for policymakers to keep central the aim to design a tax that realizes optimal efficiency and causes minimal distortions This invaluable book serves as an expert guide to VAT policy development in this area It will be welcomed not only by concerned government officials but also by tax professionals both lawyers and accountants and academics in tax law , **Minnesota Tax Revenue & Policy Review** ,1989 **Financial Accounting, 12th Edition**
