Putnam,Henriëtte de Swart,Erin Zaroukian,2016 This book investigates the morphosyntactic semantic and pragmatic properties of language and the interactions between them from the perspective of Optimality Theory It integrates optimization processes into the formal and functional study of grammar interpreting optimization as the result of conflicting violable ranked constraints Unlike previous work on the topic this book also takes

into account the question of directionality of grammar A model of grammar in which optimization processes interact bidirectionally allows both language generation the process of selecting the optimal form of a given meaning and language interpretation the process of optimal interpretation of a given form to be taken into account Chapters in this volume explore the consequences of both symmetric unidirectional and asymmetric bidirectional versions of Optimality Theory investigating the syntax semantics interface first language acquisition and sequential bilingual grammars The volume presents cutting edge research in Optimality Theoretic syntax and semantics as well as demonstrating how optimization processes as modelled in this formalism serve as a viable approach for linguists and scholars in related fields

Ad-hoc, Mobile, and Wireless Networks Nathalie Mitton, Valeria Loscri, Alexandre Mouradian, 2016-06-17 This book constitutes the proceedings of the 15th International Conference on Ad Hoc Networks and Wireless ADHOC NOW 2016 held in Lille France in July 2016 The 23 full papers presented together with one short paper in this volume were carefully reviewed and selected from 64 submissions The contributions are organized in topical sections named resource allocation theory and communications PHY MAC routing in sensors IoT DTN opportunistic networks sensors IoT security VANET and ITS and robots and MANETs **Parametric and Nonparametric Inference for Statistical Dynamic Shape Analysis with Applications** Chiara Brombin, Luigi Salmaso, Lara Fontanella, Luigi Ippoliti, Caterina Fusilli, 2016-02-11 This book considers specific inferential issues arising from the analysis of dynamic shapes with the attempt to solve the problems at hand using probability models and nonparametric tests The models are simple to understand and interpret and provide a useful tool to describe the global dynamics of the landmark configurations However because of the non Euclidean nature of shape spaces distributions in shape spaces are not straightforward to obtain The book explores the use of the Gaussian distribution in the configuration space with similarity transformations integrated out Specifically it works with the offset normal shape distribution as a probability model for statistical inference on a sample of a temporal sequence of landmark configurations This enables inference for Gaussian processes from configurations onto the shape space The book is divided in two parts with the first three chapters covering material on the offset normal shape distribution and the remaining chapters covering the theory of NonParametric Combination NPC tests The chapters offer a collection of applications which are bound together by the theme of this book They refer to the analysis of data from the FG NET Face and Gesture Recognition Research Network database with facial expressions For these data it may be desirable to provide a description of the dynamics of the expressions or testing whether there is a difference between the dynamics of two facial expressions or testing which of the landmarks are more informative in explaining the pattern of an expression *Unleashing Growth and Strengthening Resilience in the Caribbean* Mr. Krishna Srinivasan, Ms. Inci Otker, Ms. Uma Ramakrishnan, Mr. Trevor Serge Coleridge Alleyne, 2017-11-13 This book provides a diagnosis of the central economic and financial challenges facing

Caribbean policymakers and offers broad policy recommendations for promoting a sustained and inclusive increase in economic well being The analysis highlights the need for Caribbean economies to make a concerted effort to break the feedback loops between weak macroeconomic fundamentals notably pertaining to fiscal positions and financial sector strains and structural impediments such as high electricity costs limited financial deepening violent crime and brain drain which have depressed private investment and growth A recurring theme in the book is the need for greater regional coordination in finding solutions to address the Caribbean s shared and intertwined macroeconomic and structural challenges The analysis suggests that strengthening regional and global market integration of Caribbean economies would provide an impetus to sustained growth in incomes and jobs Greater regional and global economic integration would also facilitate structural transformation and a shift toward new economic activities resulting in more diversified and less vulnerable economies A central challenge for the Caribbean is thus to come together as a region overcome the limitations posed by size and garner the benefits of globalization Efforts should build on existing regional arrangements accelerating progress in implementing these agreements would stimulate trade Policymakers could also promote deeper integration with Latin America and the rest of the world by pursuing new trade agreements leveraging current agreements more effectively or deepening them to include areas beyond traditional trade issues and developing port and transport infrastructure

Stock-Flow-Consistent Models and Institutional Variety Romar Correa, Amelia Correa, 2019-02-15 Orthodox macroeconomics is founded on microeconomics Heterodox economists either reject micro foundations or experiment with behavioural relationships without paying attention to the principles that generate them The book takes off from Michal Kalecki s aphorism about economics being a science that confused stocks and flows Kalecki was famous for presiding over a marriage between Marx and Keynes and all three figure prominently in the volume However the first part of the title is a homage to Wynne Godley who pioneered stock flow consistent modeling in our times The authors exploit lagged values of variables emerging from the definitions Lags also emerge in so called stock flow norms connecting the aggregates Some moving and shaking of identities and a difference or differential equation emerges The requirements for stability of the dynamic systems are illuminating and the reader can stop at structure and history with the first half of the book The conversation with orthodoxy begins with the second part The equivalent equation systems of the first part throw up different pairs of characters whose happiness must be maximised over time The price to pay through the solution process is the confrontation with many ugly expressions but the explicit calculations are undertaken repeatedly only to reassure students through drillwork that tedium is not the same as difficulty The payoffs are that variable transitions in capitalism the second part of the title are captured from a small clutch of identities The movements from backward agriculture to capitalism from golden age capitalism to financialization are modeled A separate chapter is devoted to Europe The policy prescriptions of heterodox economics do not compare with the richness of critique and positive analysis Positive and normative are one in this work the combination of stock flow norms along with
