Research Methods for Educational Leadership and Management Musundire, Austin, 2025-05-13 Various research methods including action case study and experimental research can be tailored for educational leadership and management. Different research designs, data collection techniques and data analysis methods have differing strengths, weaknesses and challenges. As a result, it is crucial to develop the skills and confidence needed to conduct high quality research. Developing a deeper understanding of how to conduct rigorous research may consequently foster more effective and innovative research leading to improved educational policies, practices and outcomes. *Research Methods for Educational Leadership and Management* illustrates how these methods can be effectively applied to address issues in educational leadership and management. It promotes best practices in educational research by highlighting ethical considerations, addressing common challenges and providing strategies for overcoming these obstacles. Covering topics such as equity, employment practices, high performance culture and professional competencies, this book is an excellent resource for educational leaders, school managers, school administrators, policymakers, researchers, professionals, scholars, academicians and more. Furthering Higher Education Possibilities through Massive Open Online Courses Mesquita, Anabela, Peres, Paula, 2015-09-03 In recent years, technological advancements have enabled higher learning institutions to offer millions of independent learners the opportunity to participate in open access online courses. As this practice expands, drawing considerable media attention, questions continue to arise regarding pedagogical methodology and the long term viability of open learning. *Furthering Higher Education Possibilities through Massive Open Online Courses* seeks to provide a space for discussion of MOOCs, what they mean for the learning process, how they are redefining the concept of a classroom and what effects they may have on the role of teachers. Featuring emerging research on a variety of topics relating to distance education, informal learning as well as educational costs and funding, this book is aimed at teachers, administrators, business professionals and designers of both curricular resources and e classroom technology. *Making Education Inclusive* Sharon Moonsamy, Elizabeth Walton, 2015-09-18 Exclusionary pressures and practices are pervasive in education despite the clamour for more inclusive education. Even as classrooms worldwide become more diverse, education is unlikely to become inclusive without deliberate efforts to dismantle exclusion and enable inclusion. This book is a compilation of contributions to the conversation about what these efforts might entail. The conversation has its origins in the Making Education Inclusive Conference held in 2013 which brought together academics and practitioners from Southern Africa and other countries. Given the expectation that teachers should play a key role in promoting inclusion, it is not surprising to find significant interest in teacher education from many of the contributing authors. Their concerns range from explicit teacher development for pedagogical responsiveness to learner diversity to overcoming the epistemological marginalisation that learners experience where teachers are not fully confident of their subject content and how to teach it. Access to education is clearly not enough and other contributors to this book

concern themselves with ways in which structures and systems could be reconstituted to enable meaningful inclusion This might mean looking at how teachers might use tiered systems of behaviour support and various metacognitive strategies how physical access can be promoted on a university campus and understanding how parents think about disability Each chapter represents a different perspective on what it might mean to resist educational exclusion in its many forms and each offers possible ways to make education more inclusive
