headlines E billionaires Jeff Bezos and Elon Musk are planning to colonize Mars President Trump wants a Space Force to  
achieve space dominance with expensive high tech weapons The space and nuclear arms control regimes are threadbare and  
disintegrating Would be asteroid collision diverters space solar energy collectors asteroid miners and space geo engineers  
insistently promote their Earth changing mega projects Given our many looming planetary catastrophes from extreme  
climate change to runaway artificial superintelligence looking beyond the earth for solutions might seem like a sound  
strategy for humanity And indeed bolstered by a global network of fervent space advocates and seemingly rendered plausible  
even inevitable by oceans of science fiction and the wizardly of modern cinema space beckons as a fully hopeful path for  
human survival and flourishing a positive future in increasingly dark times But despite even basic questions of feasibility will  
these many space ventures really have desirable effects as their advocates insist In the first book to critically assess the  
major consequences of space activities from their origins in the 1940s to the present and beyond Daniel Deudney argues in  
Dark Skies that the major result of the Space Age has been to increase the likelihood of global nuclear war a fact  
conveniently obscured by the failure of recognize that nuclear armed ballistic missiles are inherently space weapons The  
most important practical finding of Space Age science also rarely emphasized is the discovery that we live on Oasis Earth tiny  
and fragile and teeming with astounding life but surrounded by an utterly desolate and inhospitable wilderness stretching at  
least many trillions of miles in all directions As he stresses our focus must be on Earth and nowhere else Looking to the  
future Deudney provides compelling reasons why space colonization will produce new threats to human survival and not

alleviate the existing ones That is why he argues we should fully relinquish the quest Mind bending and profound Dark Skies challenges virtually all received wisdom about the final frontier Teaching Problem-Solving and Thinking Skills through Science Belle Wallace,Andrew Berry,Diana Cave,2013-02-01 This highly practical resource book presents ways in which teachers can help to develop children s problem solving and thinking skills through a range of exciting science topics The book contains classroom based activities which have been trialled and evaluated by teachers and children and helpfully shows how the skills developed through rigorous scientific investigations can be used across all areas of the curriculum The scientific curriculum requirements are extended with exciting and inspiring problem solving activities that use scientific skills for example fair testing pattern seeking surveying classifying and identifying investigations over time designing testing and adapting an artefact open ended exploration The book contains learning objectives for each activity step by step guidelines for carrying out each problem solving activity basic equipment that s needed examples of learner s work and guidelines for assessment This book is a must buy for all early years and primary school teachers keen to encourage an inclusive but differentiated approach to the development of problem solving and thinking skills in their pupils
